Going ahead with Mokka

Monday, 17 November 2008 08:50 (20 minutes)

Mokka has been the framework for the ILD detailed simulations as well for the Calice prototypes. Despite some projects to start from the scratch a new simulation framework, probably we'll still need to use and develop Mokka for a while. We discuss in this talk some ideas addressing the performance and the sharing geometry issues, as well some cosmetic improvements bringing it more verbose and self documented

Presenter: Mr MORA DE FREITAS, Paulo (LLR)

Session Classification: LCWS: Simulation and Reconstruction
