## Calorimeter Test Beam Requirements

for

ILC Detectors

Andy White

University of Texas at Arlington

LCW508, Chicago, November 2008

#### With thanks to:

Felix Sefkow, Jose Repond, Roman Poeschl, Jae Yu, Paul Dauncey, John Hauptman, Marcel Reinhard,... for helpful thoughts, comments etc. ...and apologies to those I did not talk to...

### Outline

#### A series of questions:

- What tests have been made so far some examples of results
- What do we need to test next?
- What test beam facilities do we have?
- What extra facilities do we need?
- When might we need them?
- How far do we need to go in tuning our simulations to match test beam data?

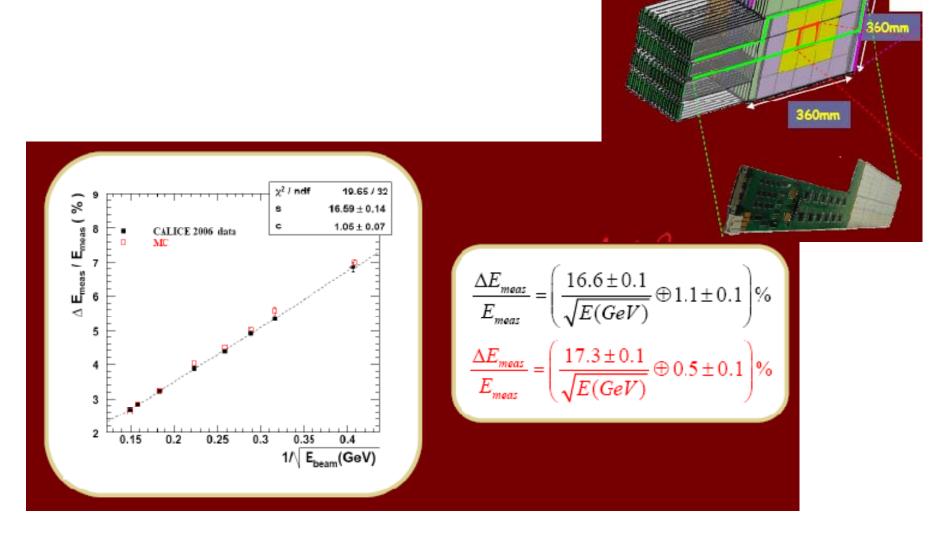

# What tests have been made so far - some examples of results

### Overview of ILC Calorimeter development

- 1) Electromagnetic calorimetry
  - CALICE Si-W
  - CALICE Scintillator -W
  - Oregon-SLAC-BNL Si-W
  - CALICE MAPS DECAL
- 2) Hadron calorimetry
  - CALICE Scintillator-Steel AHCAL
  - CALICE RPC-Steel DHCAL U.S.
  - CALICE RPC-Steel DHCAL Europe
  - CALICE GEM-Steel DHCAL
  - CALICE Micromegas-Steel DHCAL
- 3) Dual readout ECal + HCal

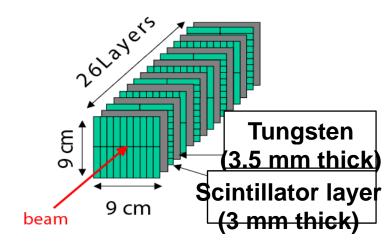

## Example: CALICE test beams at DESY, CERN

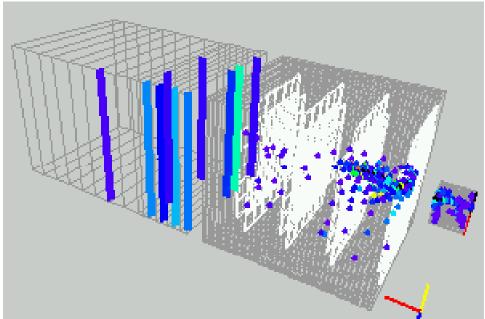

(1) Si-W ECal 2006/7

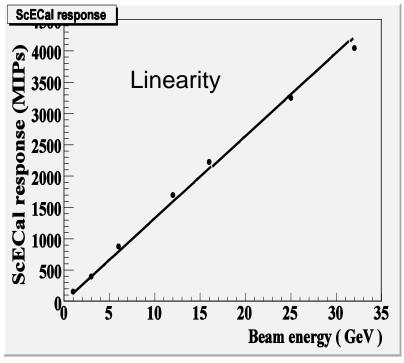

## Example: CALICE test beams at FNAL

### (2) ScECal 2008

## Example: CALICE test beams at CERN, FNAL

- (3) Scintillator/SiPM AHCAL
- -> results from CERN TB runs in 2006:

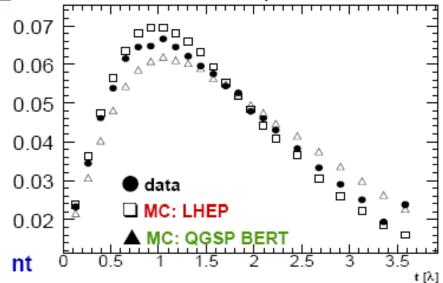

Longitudinal shower profile

Using CERN 2006 data (23 layers)

- combined AHCAL+TCMT data
- latest data corrections & MC digi
- Birks' law included in MC

⇒ longit. granularity can provide contraint

er models!

#### CALICE/FNAL summer 2008

#### Run Plan - Accomplishments

4.-7. July: Muon Calib. accomplished 9/7/08
At two different holds

8.-9. July: Dedicated Ecal Running accomplished 13/7/08 with trigger optimized Ecal

> 9. July: Running with slow trigger

10.-16. July: Completion of accomplished 20/7/08 (low energy) pion program

17. July: Running with Hcal and Ecal accomplished 22/7/08 shifted w.r.t beam and to each other

18.-24. July: Running at rotated position
10 (20) and 30 degrees

Cover the full energy range

accomplished 26/7/08
20 and 30 Degrees

25.-26.July: Spare Time for combined program or low energy proton running

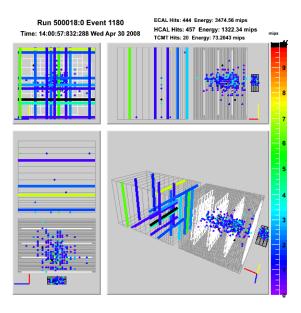

(but not all points)

27. July – 1. August Hcal Only Running

CALICE Collaboration Meeting Sept. 2008

A 120 GeV proton shower recorded by W/Si Ecal+steel/scintil.Hcal+TailCatcher. (Wed 30 Apr 2008)

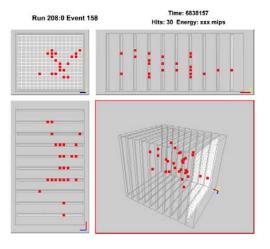

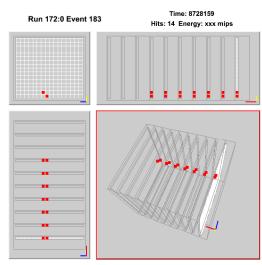

22

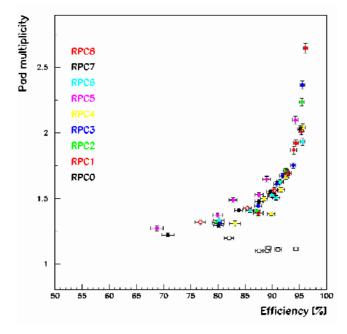

## Example: CALICE test beams at FNAL

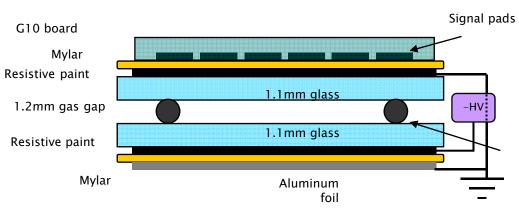

(4) RPC/Steel DHCAL (U.S.)

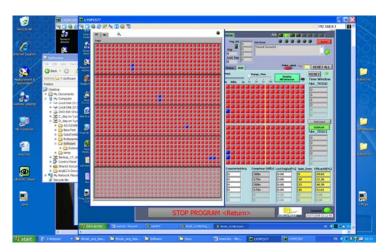

## Example: CALICE test beams at CERN

Test a mini DHCAL with new generation embedded electronics readout in beam conditions for the first time

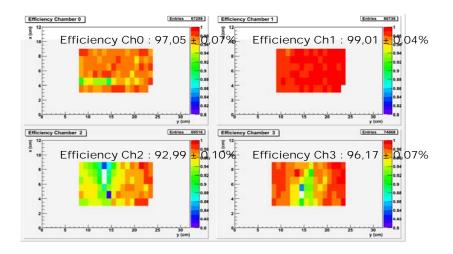

With 2 cm Steel slabs and one  $\lambda$  I.L (Tungsten)

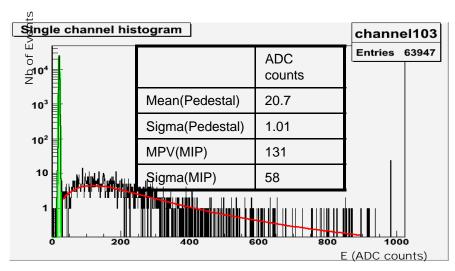

## Example: CALICE test beams at CERN

### (6) Micromegas DHCAL (Europe)

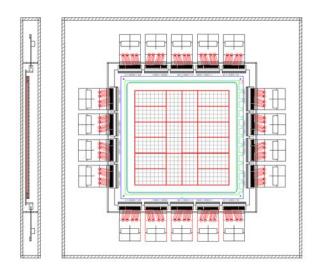

- The data (CERN H2B)
  - 6-7 August Muons & Pions (Gain inter-calibration)
  - 14-15 August : 205 000 Muons
- 15 August : 150 000 Pions

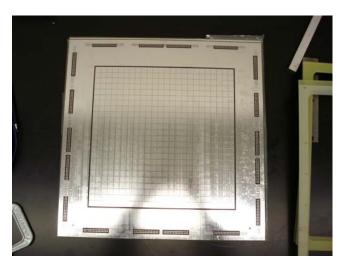

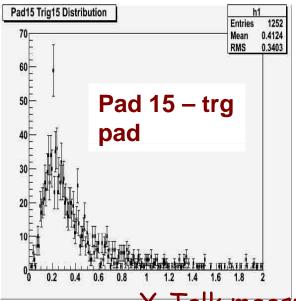

## Example: CALICE test beams at FNAL

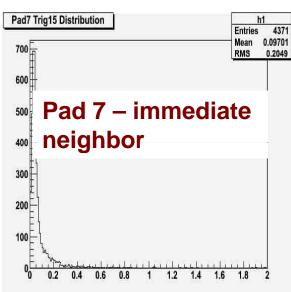

### (7) GEM-DHCAL 2007

X-Talk measurement

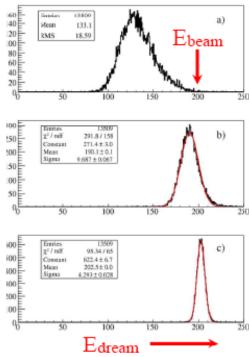

## Example: 4th Concept

- L3 BGO crystals in front of small DREAM module
  - -> August 2008 data analysis in progress.
  - -> Two papers expected
  - -> Small module => no hadron containment Hadronic energy

Dual-readout calorimeters
(CERN beam tests)

BGO
beams

Hadronic energy resolution (fibers)

# What test beam facilities do we have?

See previous talks +...

### Test Beam Facilities as of mid-2007 - needs update!

Facility	Primary beam energy (GeV)	Particle types	Beam lines	Beam Instr.	Availability and plans
CERN PS	1–15	e, h, µ	4	Cerenkov, TOF, MWPC	Available, but reduced services during LHC commissioning
CERN SPS	10-400	e, h, μ	4	Cherenkov, TOF, MWPC	Available, but reduced services during LHC commissioning
DESY	1–6	e	3	Pixels	Available over 3 mo/yr
FNAL- MTBF	1-120	p, e, h, μ	1	Cherenkov, TOF, MWPC, Si strips, pixels	Continuous at 5% duty factor, except for summer shutdowns
Frascati	0.25-0.75	e	1		Available 6 mo/yr
IHEP- Beijing	1.1-1.5 0.4-1.2 (secondary)	e e, π, p	3	Cherenkov, TOF, MWPC	Available in March 2008 or later
IHEP- Protvino	1–45	e, h, µ	4	Cherenkov, TOF, MWPC	Two one-month periods per year
KEK-Fuji	0.5–3.4	е	1		Available in fall 2007, for 8 mo/yr, as long as KEKB operates
LBNL	1.5; <0.06; <0.03	e; p; n	1	Pixels	Continuous
SLAC	28.5 1–20 (secondary)	e e, π, p	1		Shutdown in 2008- 2009, with uncertain plans beyond

From Fermilab-TM-2392-AD-DO-E Roadmap TB document, 2007

# What do we need to test next? Short/medium term

### CALICE 2008-2010

SiW ECAL + SciFe HCAL: essentially compete

SciW ECAL + SciFe HCAL: one more beam period at MTBF in spring or early summer 2009, maybe including some HCAL standalone runs with e-

Any ECAL, most likely SiW, + RPCFe HCAL(US): start integration and first runs with sub-set of  $\sim$  10 layers in 2009 at MTBF, hopefully to be completed with fully equipped cubic-meter in first half of 2010 - including tests with GEM replacement layers in 1m<sup>3</sup> - later in 2010.

European DHCAL: individual/few layers in 2009; full scale prototype in late 2009/early 2010 (at CERN?)

ECal EUDET Module: complete by end 2009 -> beam tests in 2010

SciFE HCAL: multiple integrated layers in 2010?

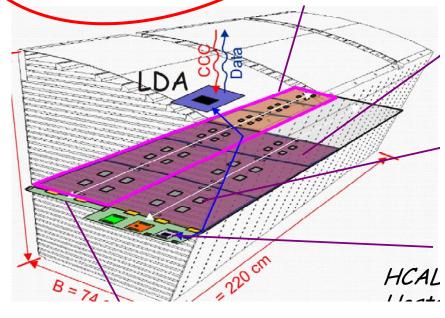

EUDET module FEE: module FEE: module

issues

- <u>Technical prototype</u>
- Test many technical issues
  - "stictchable" motherboards
  - Minimize connections between boards
  - Reduce PCB thickness to <1mm</li>
  - Internal supplies decoupling
  - Mixed signal issues
  - Digital activity with sensistive analog front-end
  - Pulsed power issues
  - Electronics stability
  - Thermal effects
  - To be validated in beam

C. de La Taille - CALICE/Manchester '08

## 4th Concept

- Plans (from 2006) for 1m<sup>3</sup> module construction at Fermilab. ...but...no funding.
- Current aim:  $1m^3$  dual readout fiber module  $(10\lambda)$  + dual readout crystal calorimeter  $(25X_0)$  in front 1 month test.

- Adam Para - total absorption calorimeter/dual readout;

EM section crystals/Si pixel layers/Hadronic section with larger crystals

Timescale for tests?

## What do we need to test next? Short/medium term

It appears that this program can be achieved with existing test beam facilities.

# What do we need to test next? Long term

Will depend on technology choices and other concept-dependent issues...a few items may be anticipated...

## SiD Si-W Electromagnetic Calorimeter

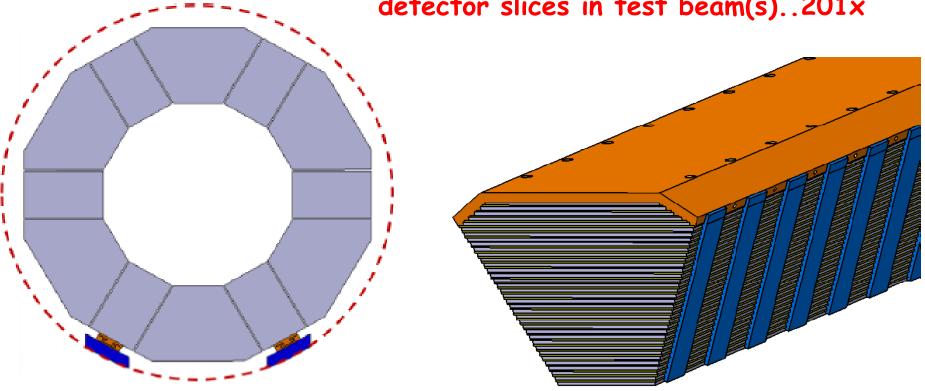

#### R&D needed to demonstrate readiness for "RDR" (2012):

- Fabricate a functional test module with the real elements, KPiX-1024 bump-bonded to sensors
  - Test in a beam with good noise performance
- Long flex-cables
- Mechanical prototype (including thermal demonstration)

## SiD HCal Engineering Design

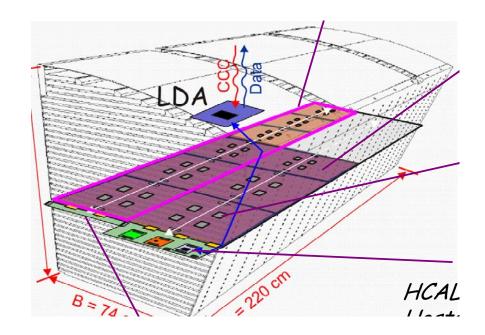

Design work by Nicolas Geffroy (LAPP)

More realistic engineering designs are emerging - eventually we will need to test complete modules, and complete detector slices in test beam(s)..201x

### CALICE

Full HCal module with existing absorber in 2011?

Full wedge (tracking, ECal, HCal,...) beam tests??

-> PFA validation? B-field tests? ...?

### Particle ID

- Not discussed in ILC detector meetings recently
- What Particle ID does the ILC physics program need
- 4th Concept have their own view...

John Hauptman - this meeting

## Questions for the future

- Do we need to test technical prototype modules in magnetic fields?

If so, how do we provide a large volume, high field region?

- $\rightarrow$  Size of effects simulations?
- $\rightarrow$  Lead time for request to labs, agencies?
- Do we need higher energy beams than we have now? What if CLIC turns out to be the right machine?
  - → New/heavy particle(s) may decay to multiple jets with not so high energies?
  - → Depth of calorimetry/size of detector?

## Questions for the future

- Do we still need to think about getting the shower model(s) in GEANT4 "right"?
  - → restrict range of models/parameters constrain to test beam data?
- -...and, do we need a neutral beam?
  - $\rightarrow$  if we have the charged component of showers correct, are there models for neutrals that are significantly different? Would this affect the PFA(s)?
  - → large experimental effort on neutral beams is it worth it?

### Questions for the future

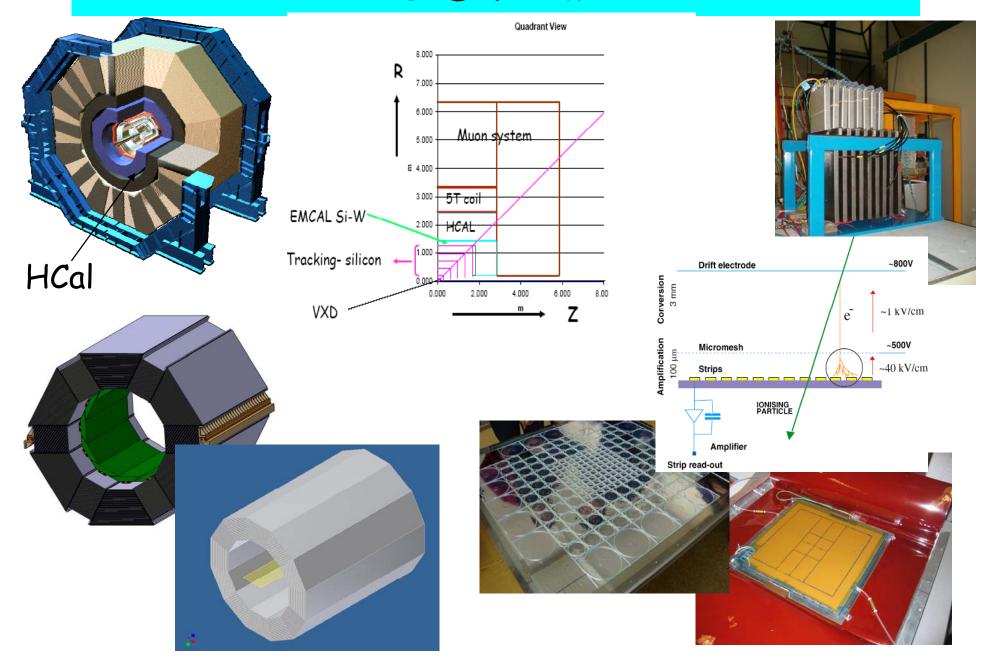

- what are the prospects for getting "synchronous" beams at CERN and/or MTBF?
  - → for which aspects of detector development is this critical, and when?
- CALICE: test EUDET electronics with power-pulsing? CERN PS or Fermilab MTBF?

### Conclusions

- Vigorous test beam program in progress
- Extensions into 2009/2010
- Present facilities appear to accommodate the program through 2010
- Long term tests not so well defined
- Need to decide soon (for funding, planning, construction,... lead time) if we need additional significant facilities and/or long term attack on GEANT4 shower model(s) issue.
