

Entity diagram

- files and configuration database -

Valeria Bartsch

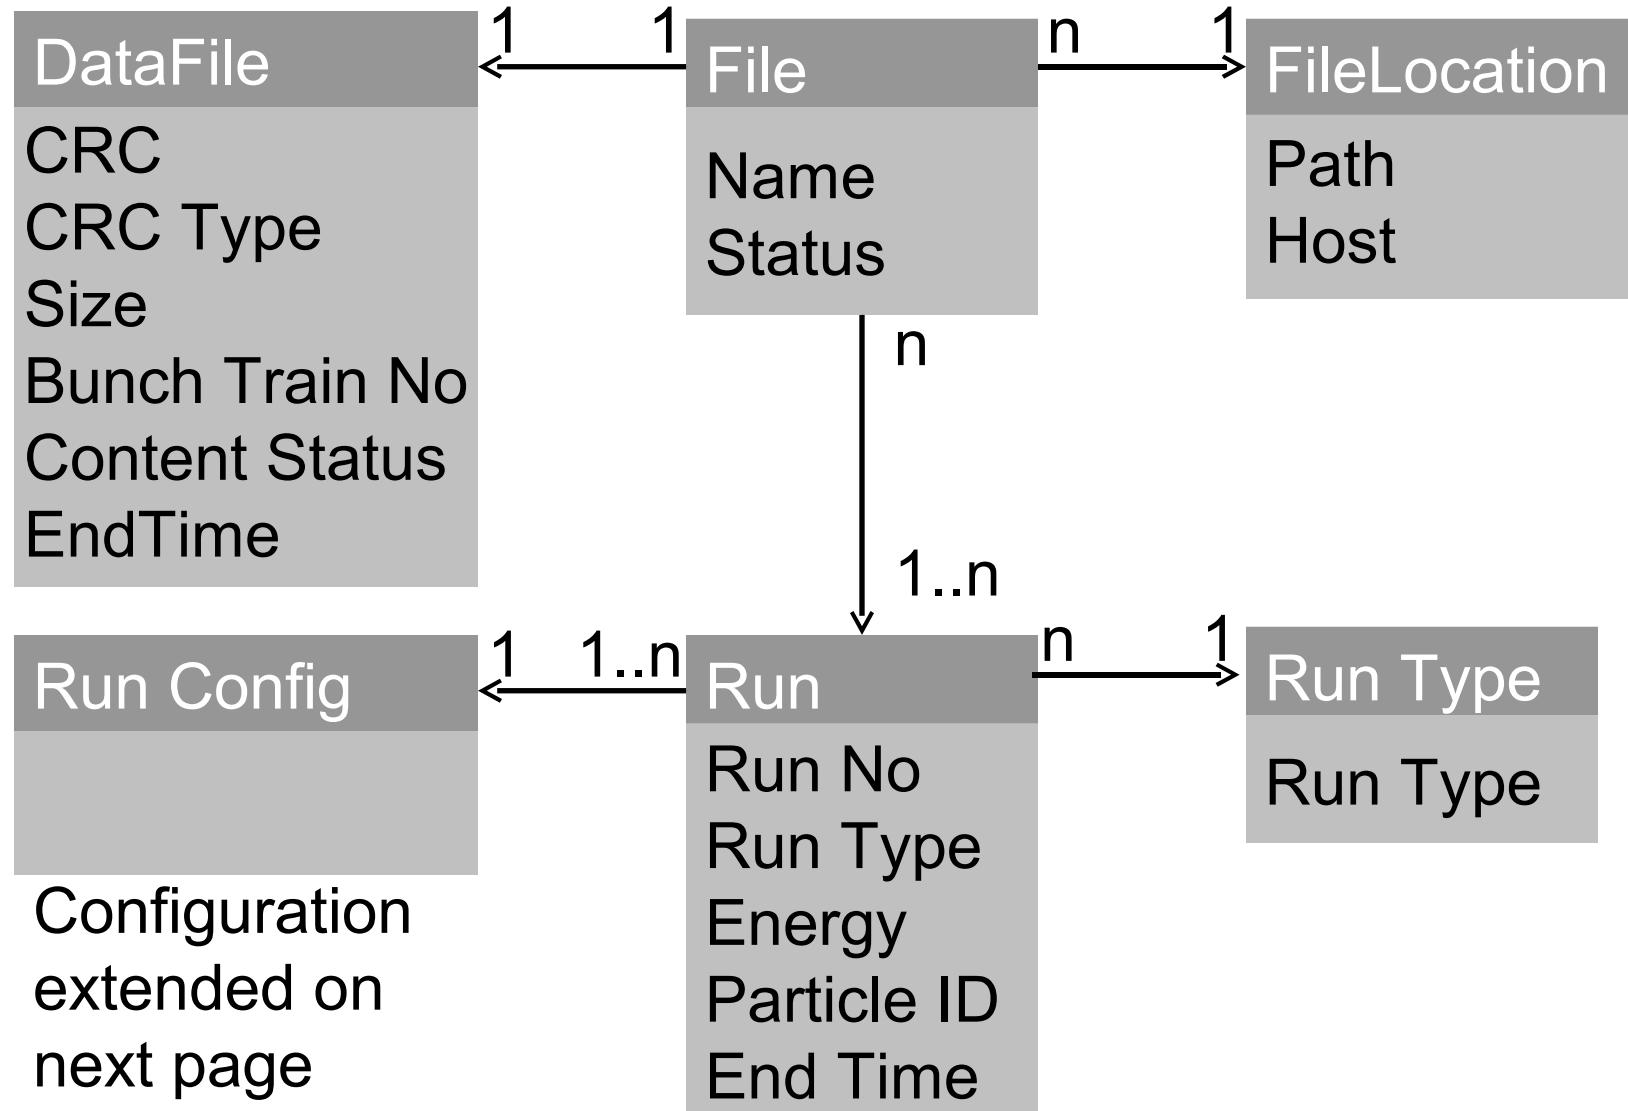

Aim of the database

- Device database:
 - Connections between devices (ODR-LDA, LDA-DIF, DIF-DIF)
 - Starting parameters (e.g. port number, hostname)
- File database:
 - Host and path of file storage
 - Information about stored files
- Configuration database:
 - Fixed and not-fixed properties of all devices to be loaded
- Relate all of it to make a **RUN**

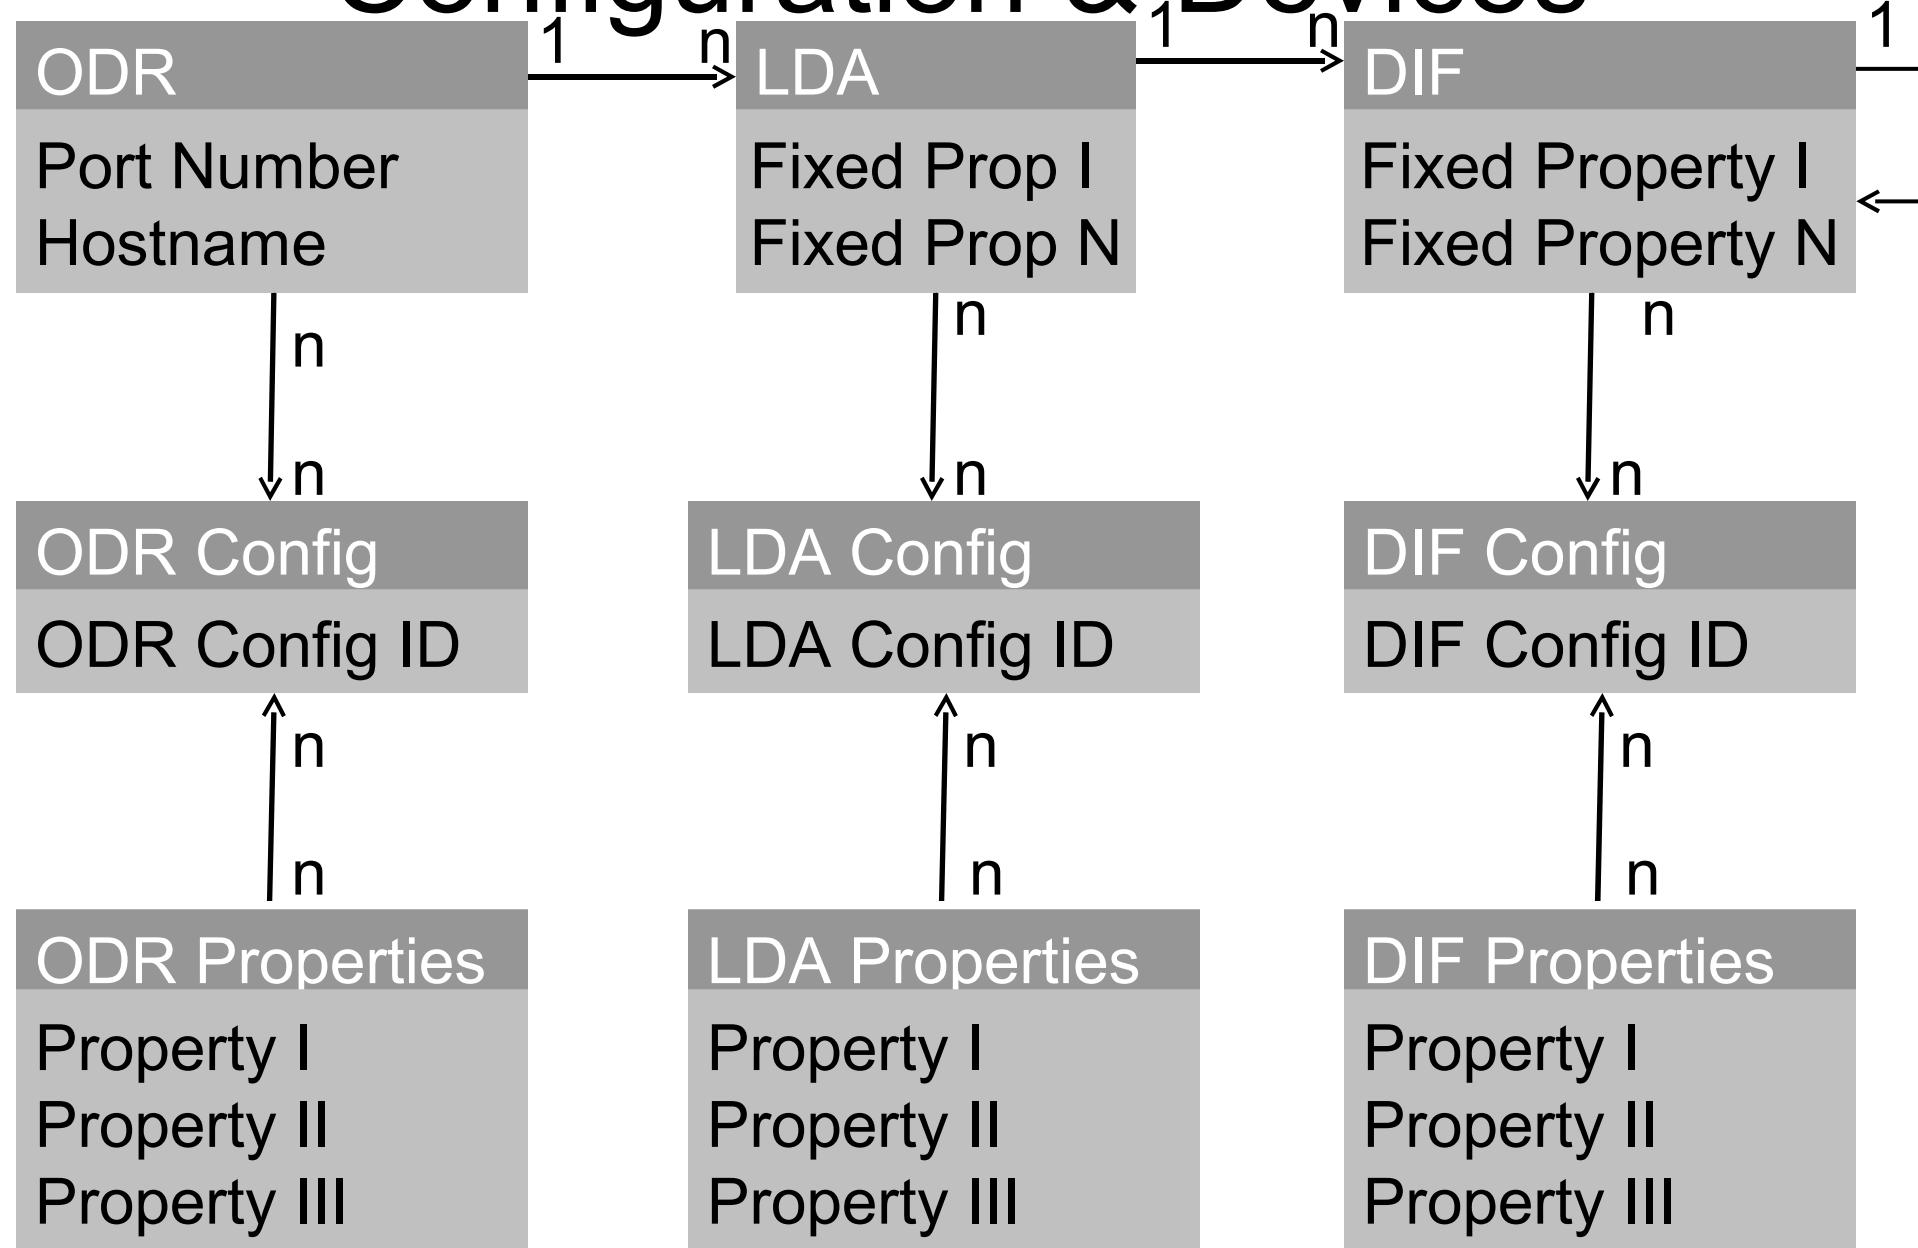

Current status of database

- Choice of database: MYSQL
- Entity diagrams made
- Use cases made and evaluated
- database populated with mockup data
- C++ connector (working inside DOOCS)
to be built
