

Simulations Group

2009.02.04. Kiyoshi Kubo

- Little progress has been reported since Chicago meeting. (It looks we have smaller manpower.)
- Making a reliable list of the tolerances (hardware specs). There was a little progress on magnet strength accuracy.
- Teleconference will be held in this month.
- We are trying to plan ILC-CLIC Beam dynamics workshop. Probably in the summer (?)
- More work needed on:
 - Low emittance preservation in RTML.
 - Known specific problems, e.g.
 - Scale error of BPM in ML.
 - Coupler wake in bunch compressors
 - Still trying to find people to be responsible.
