

Beam extraction by using the local bump and auxiliary septum

2.6mrad kick angle

Beam extraction test by using the kicker magnet, the local bump and auxiliary septum

The kick angle (Normal operation 39000) could reduce to 24000.

Beam kick test at ATF2 line

60cm long Strip-line kicker

	Left Side electrode	Right Side electrode(Calc.)	
2ns pulse	-400 ~ -380urad	+280 ~ +240urad	(600urad)
(Vertical)	+50urad	+40urad	(0urad)
4ns pulse	-750 ~ -640urad	+480 ~ +440urad	(900urad)
(Vertical)	+70urad	+70urad	(0urad)

30cm long Strip-line kicker

2ns pulse	-313 ~ -283urad	+270 ~ +257urad	(350urad)
(Vertical)	+40urad	+20urad	(0urad)

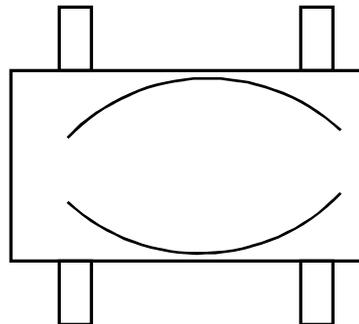

60cm Left side electrode

60cm Right side electrode

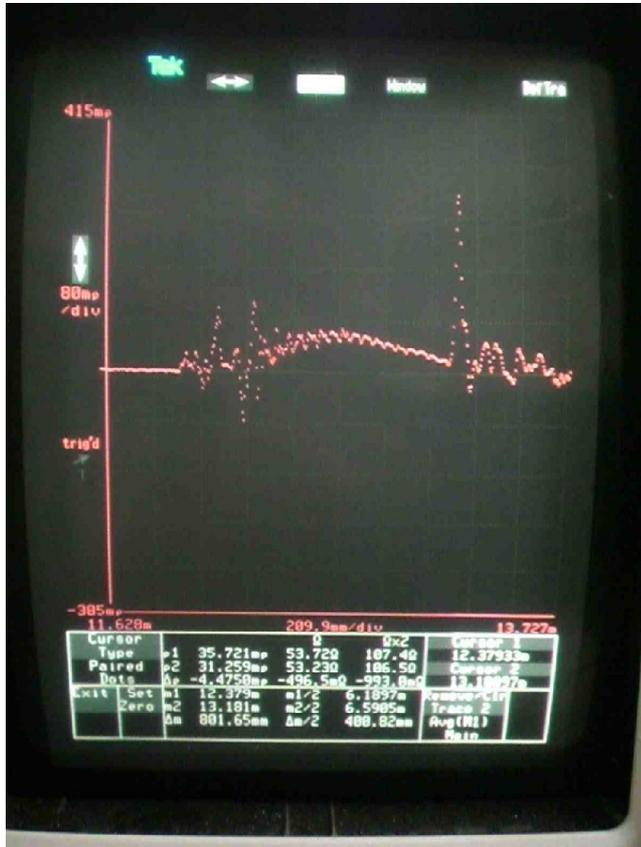

In 52.95Ω
 Out 52.95Ω
 Middle 48.9Ω

In 57.3Ω
 Out 50.16Ω
 Middle 41.9Ω

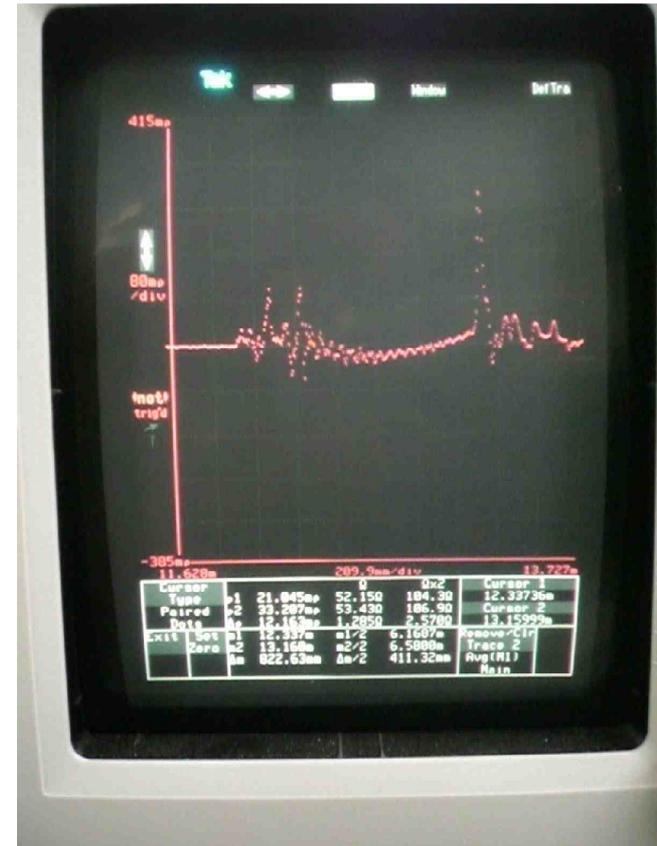

(Beam Test)

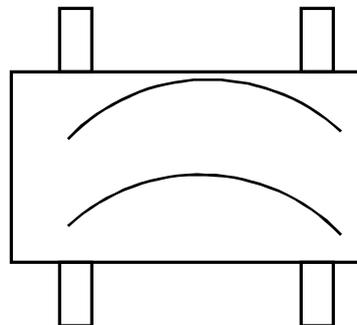

60 cm Left side electrode

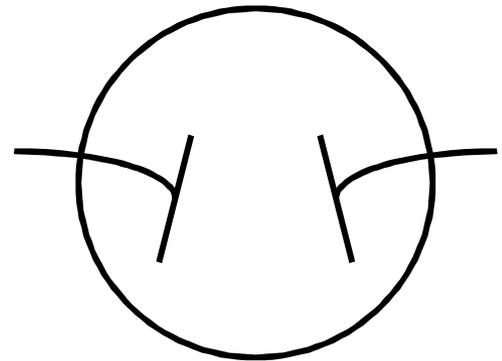

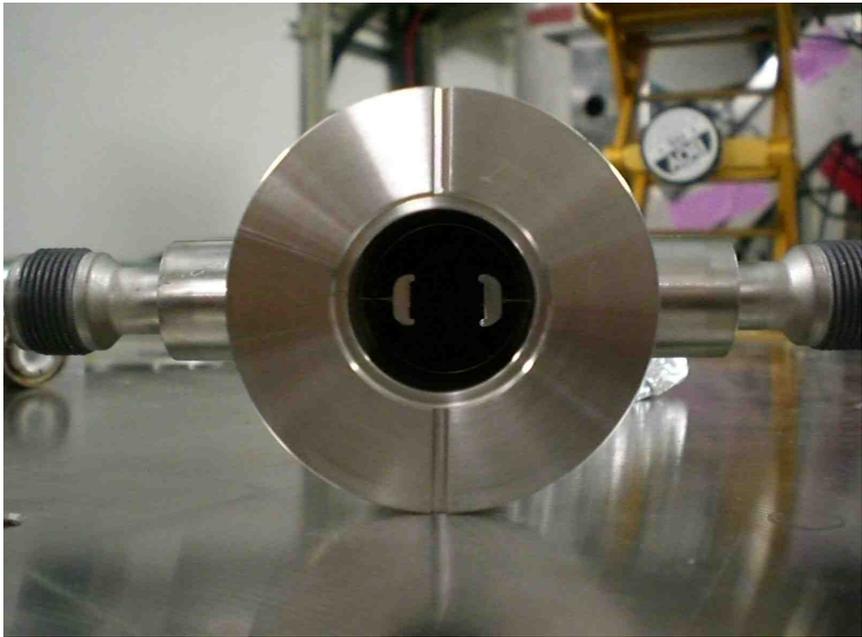

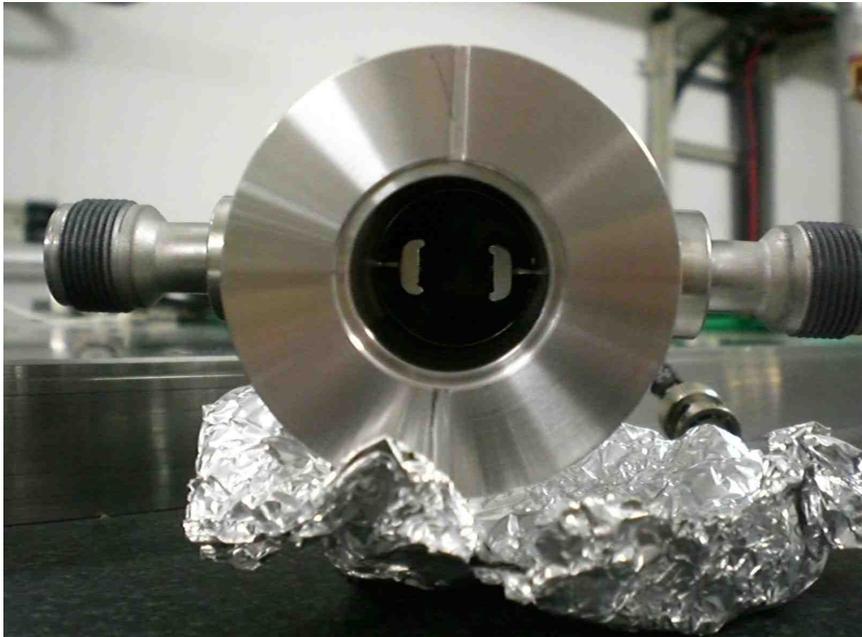

60cm Right side electrode

In 53.5Ω
 Out 53.2Ω
 Middle 58.5Ω

In 52.2Ω
 Out 53.1Ω
 Middle 45.4Ω

Improvement for the next experiment

- Re-fabricate the strip-line electrode
- Using 4ns pulser x 4 (20%)
- Strip-line gap 12mm ->11mm(10%)
- Strip-line length 60cm ->66cm(10%)
- Length of the BS0X 57cm ->37cm
 - The orbit difference of the upstream of the BS0X increases ~1mm

Schedule of the next beam test

2009/10/19~

1 week
