

Dark matter search in higgs portal scenario

'09 11/26

Takahiro Honda (Tohoku)

status

- Check the cross-section limit with following setup.
- To reduce WW event, JetAnalysis code was improved.

Setup

- Checked dark-matter mass : 10 ~ 100 GeV
- Background
 - ZZ, WW, Zvv
- Luminosity : 2 ab⁻¹
- Ecm : 300 GeV
- Beam polarization : right handed electron 80%

Summary & plan

Summary

- The cross section limit is being checked now.
- Improved JetAnalysis code was prepared.

Plan

- Continue checking the cross-section limit.

Event under consideration

< signal (scalar) >

- $ee \rightarrow ZH^* \rightarrow qqDMDM$

< background >

- $ee \rightarrow WW : 9024\text{fb}$
 - $WW \rightarrow qqln$
- $ee \rightarrow ZZ : 515\text{fb}$
 - $ZZ \rightarrow qqnn$

ILC sensitivity : fermion

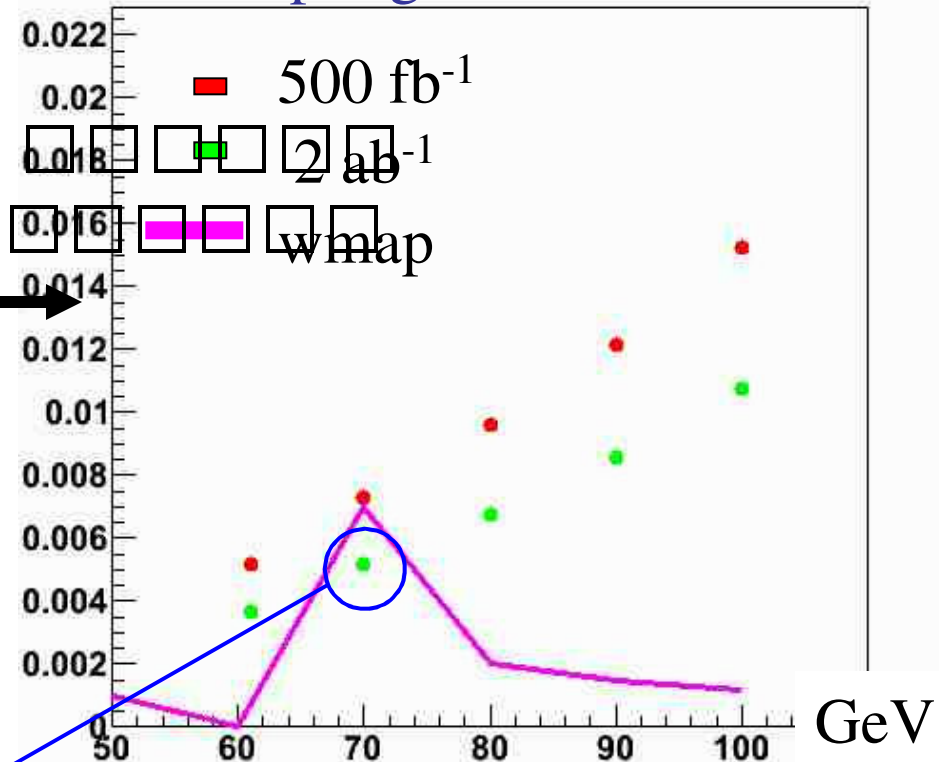

$E_{cm} : 500 \text{ GeV}$

Beam polarization : non

cross section limit

coupling constant limit

Check the missing mass distribution at this point

Missing mass

Missing mass distribution was checked at 70 GeV

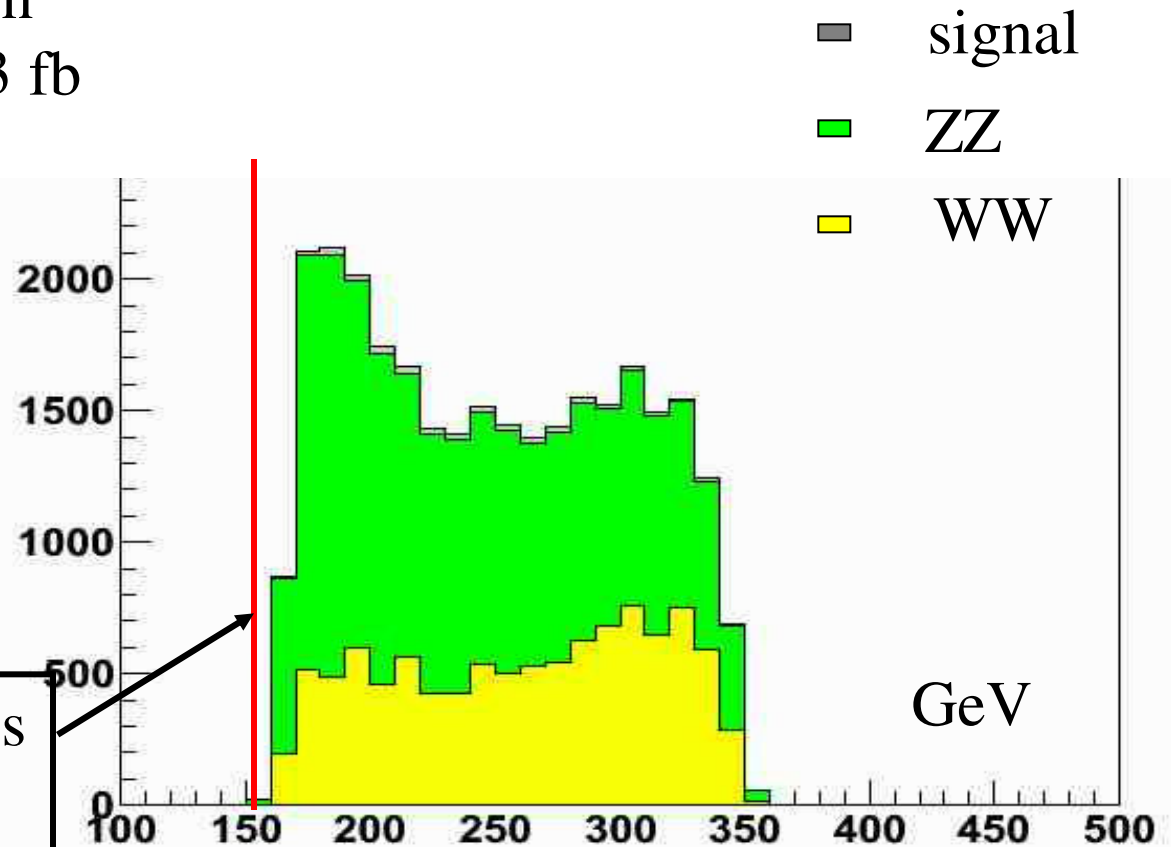

Dark-matter mass : 70 GeV

Dark-matter type : fermion

Signal cross section : 0.53 fb

Luminosity : 2ab^{-1}

Significance : 2σ

Z-energy cut makes this threshold.
