

Study of Higgs Self-couplings at ILC

J. Tian (Tsinghua U.)

Y. Takubo (Tohuko U.)

K. Fujii (KEK)

Y. Gao (Tsinghua U.)

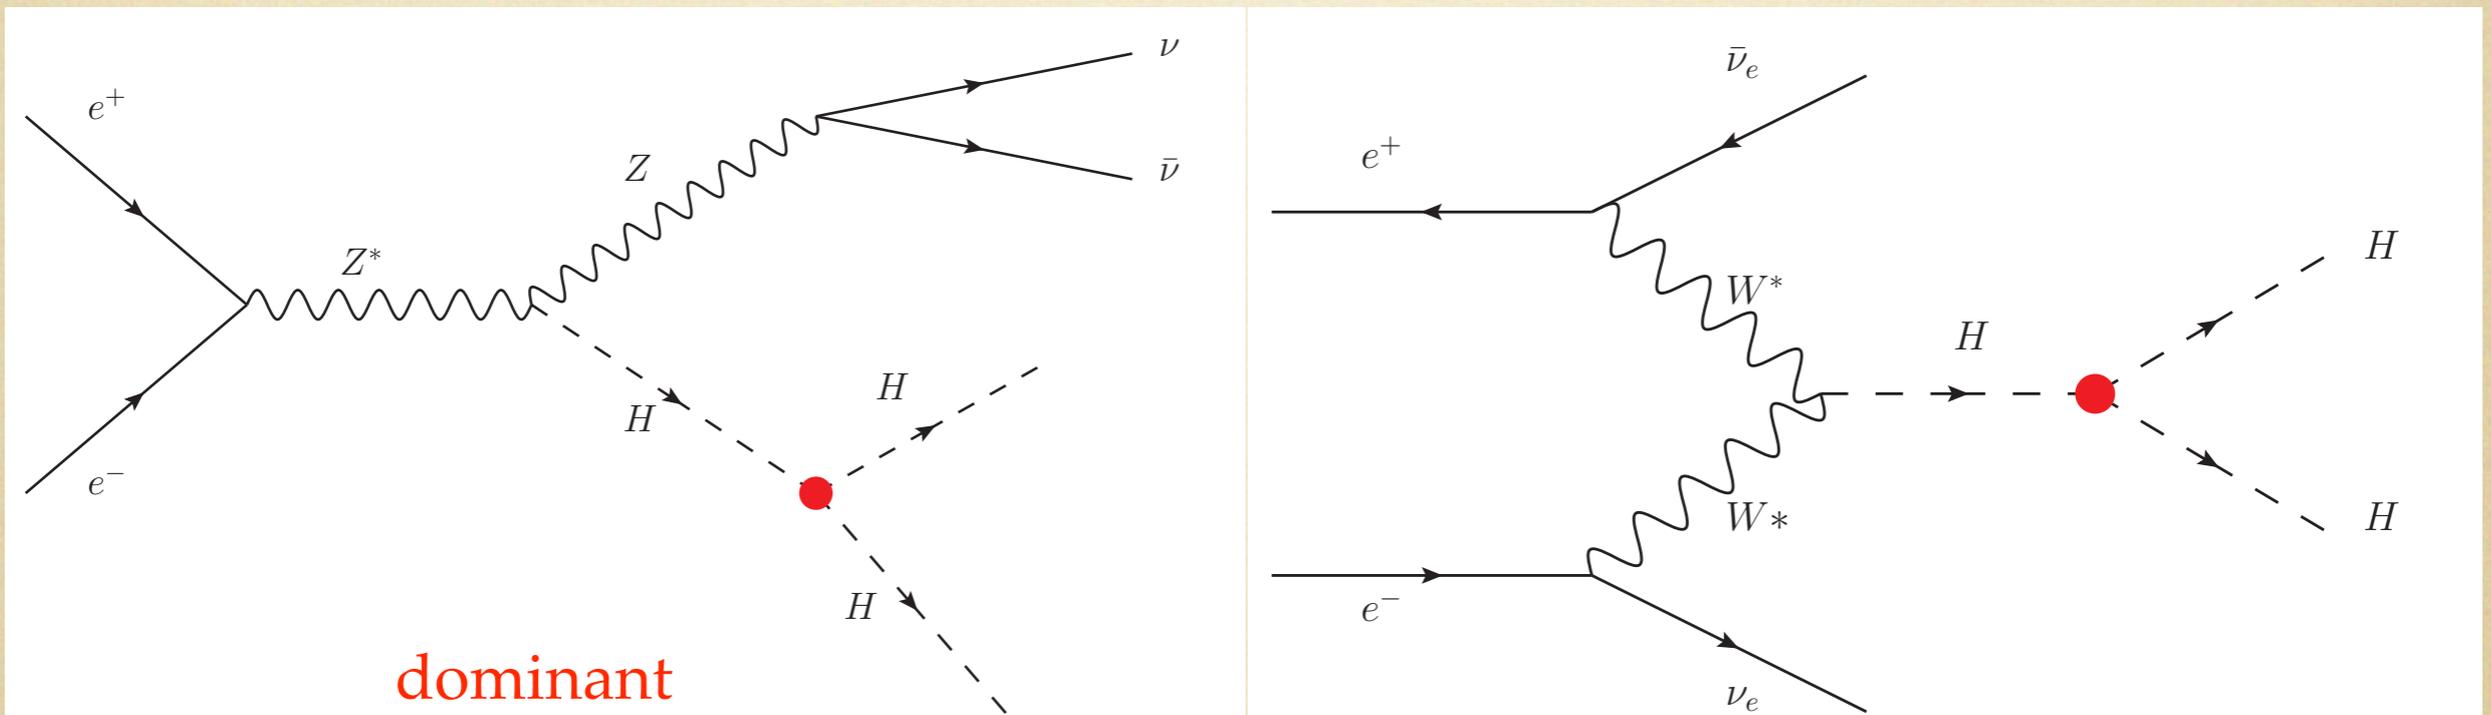

$$e^+ + e^- \rightarrow ZHH \rightarrow (\nu\bar{\nu})HH$$

$$\sigma = 33.9\text{ab} \quad @E_{\text{cm}} = 500\text{GeV}, M_H = 120\text{GeV}$$

full simulation

Marlin framework

(v01-07)

$$e^+ + e^- \rightarrow ZHH \rightarrow (\nu\bar{\nu})(b\bar{b})(b\bar{b}) \rightarrow \nu\bar{\nu} + 4 \text{ bjets}$$

pre-selection:

- no isolated charged leptons
- force the particles(PFOs) to four jets
- combine the four jets by minimizing

$$\chi^2 = \frac{(M(b, \bar{b}) - M_H)^2}{\sigma_{H_1}^2} + \frac{(M(b, \bar{b}) - M_H)^2}{\sigma_{H_2}^2}$$

requirement implied in the pre-selection:

- $|M(\text{jj}) - M(H)| < 80 \text{ GeV}$

isolated lepton selection

similar with the method used in $e^+ + e^- \rightarrow ZHH \rightarrow (l\bar{l})(b\bar{b})(b\bar{b})$

$$e : \begin{cases} \frac{E_{ecal}}{E_{total}} > 0.9 \\ 0.8 < \frac{E_{total}}{P} < 1.2 \\ P > 25.5 + 0.25E_{cone} \end{cases} \quad \mu : \begin{cases} \frac{E_{ecal}}{E_{total}} < 0.5 \\ \frac{E_{total}}{P} < 0.3 \\ P > 28.3 + 0.1E_{cone} \end{cases}$$

E_{ecal} : energy deposited in the ECal

E_{total} : energy deposited in ECal and HCal

P : momentum

E_{cone} : charged cone energy with $\text{Cos}\theta_{cone} = 0.98$

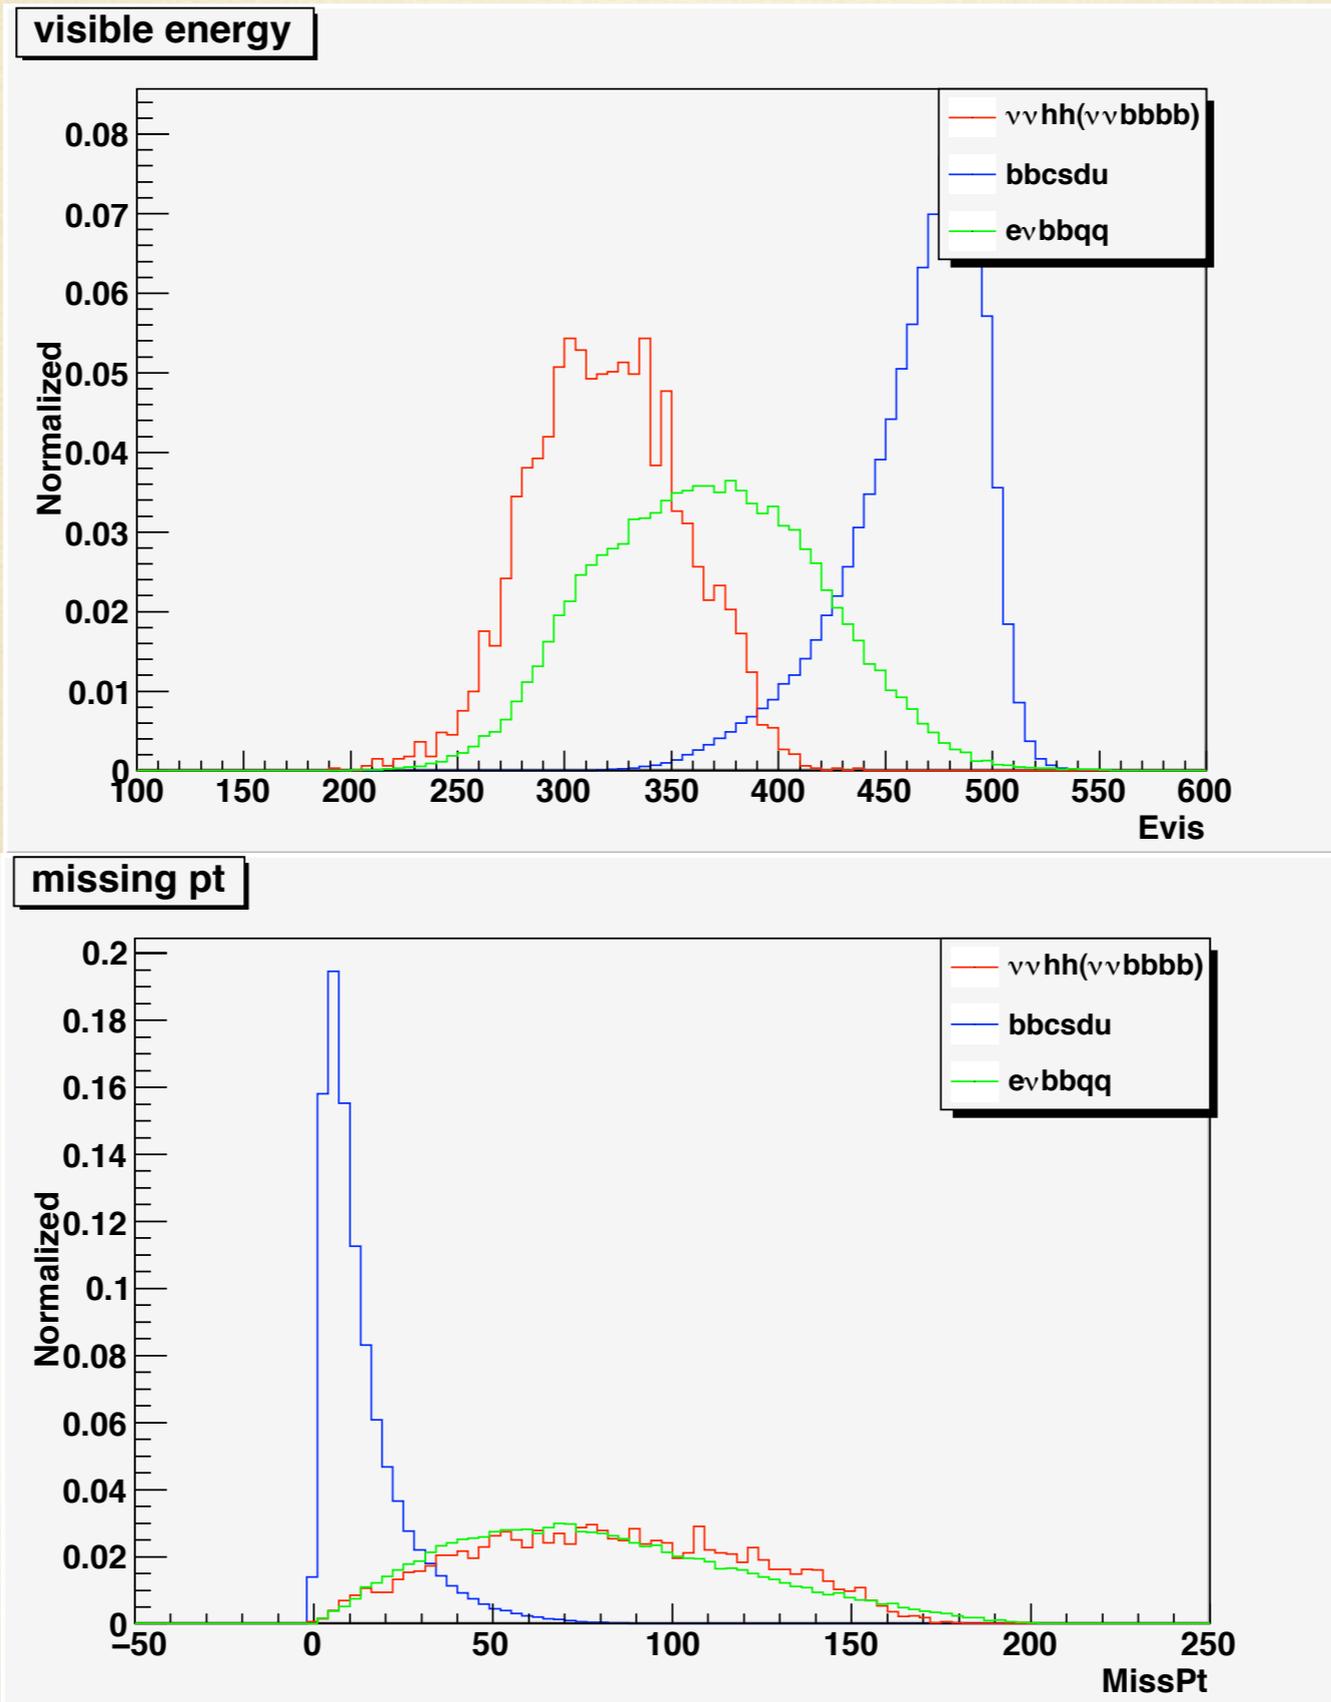

signal and backgrounds

$$E_{\text{cm}} = 500\text{GeV}, M_H = 120\text{GeV}$$

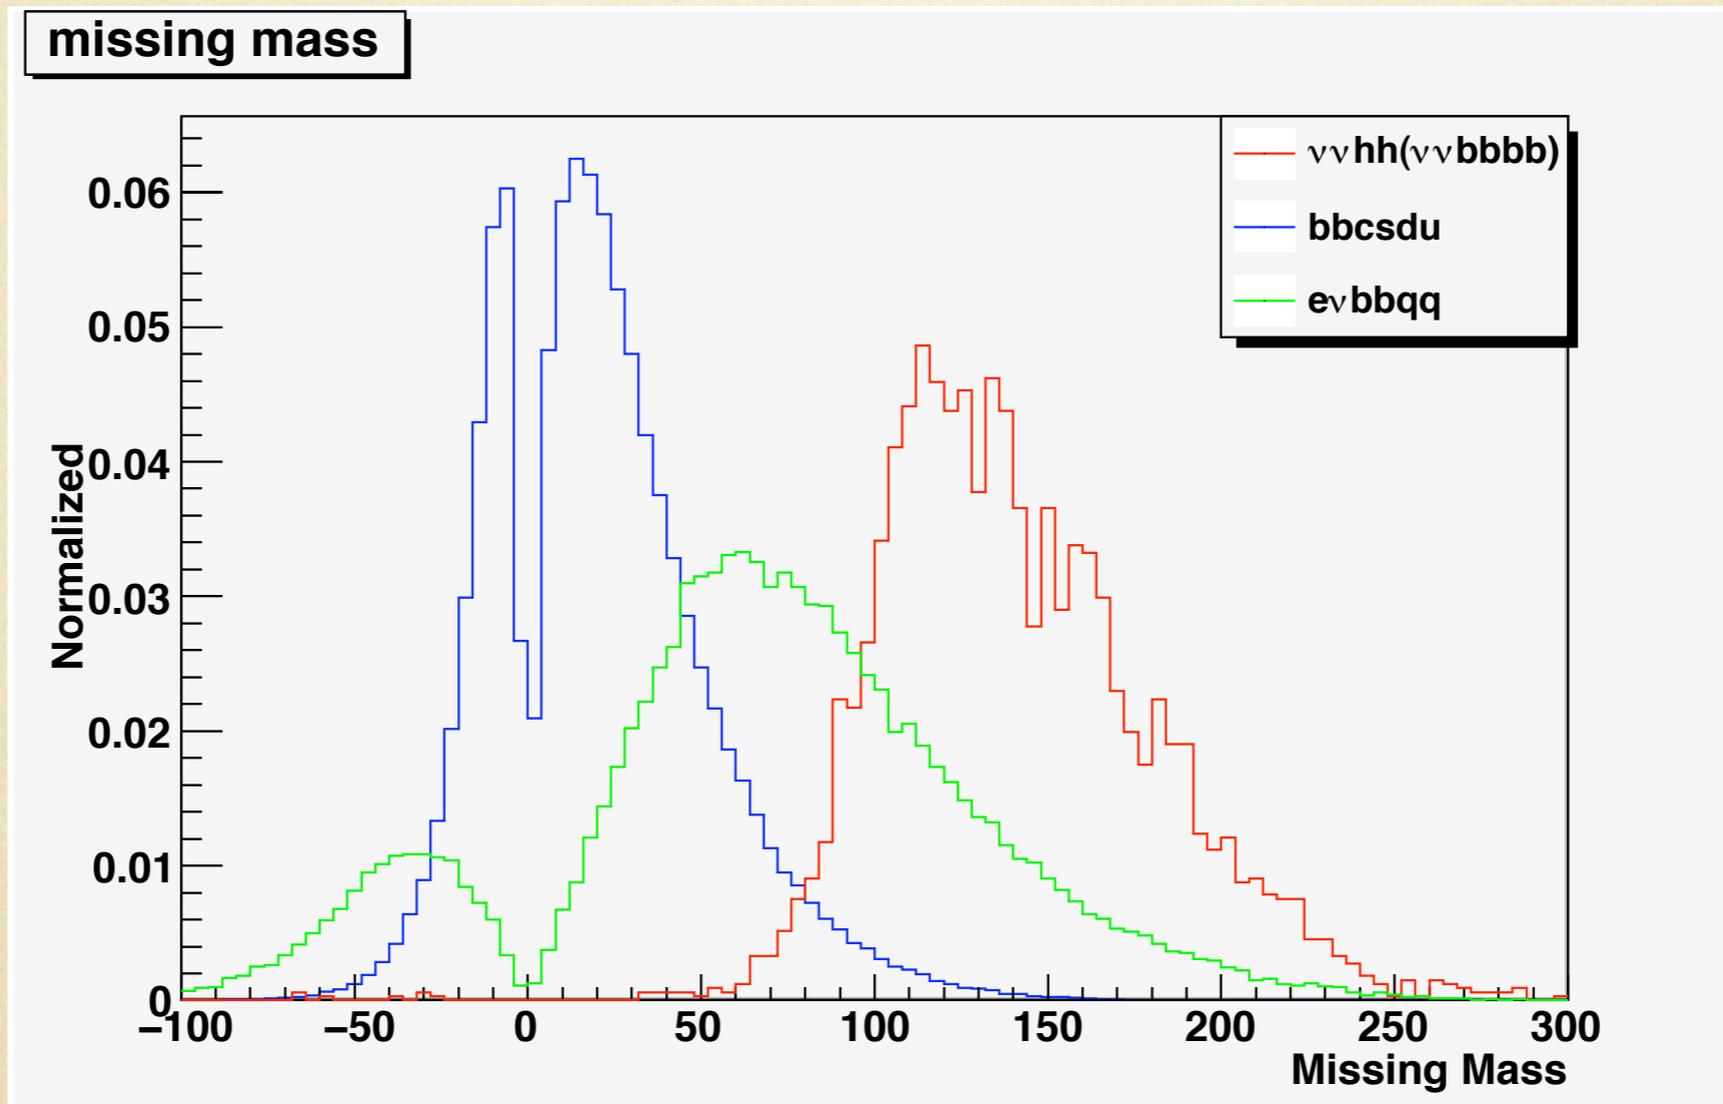

$$\int L dt = 2\text{ab}^{-1}$$

summary

- tau mode of $t\bar{t}$ events became the dominant background.
- $v\bar{v}b\bar{b}b\bar{b}$ and $v\bar{v}b\bar{b}H$ samples are needed to generate.
- increase statistics of signal and then do neural-net training.
