

SUSY model in view of the CLIC staged energy approach

James Wells

September 27, 2011

Context

- In consultation with Lucie Linssen, Steinar Stapnes, Mark Thomson and others, desire was to add input to the European strategy report
- Would a staged energy approach to building linear collider be worthwhile?
- Beyond SM theory may have many thresholds
- Example: one of our benchmark points for the CLIC CDR

Indirect constraints for this model:

"Model II"

$$\begin{aligned}\Omega_{\text{DM}}h^2 &= 0.1105 \\ \Delta a_\mu &= 6.04 \times 10^{-10} \\ BR(b \rightarrow s\gamma) &= 3.01 \times 10^{-4} \\ BR(B_s \rightarrow \mu^+\mu^-) &= 3.9 \times 10^{-9}\end{aligned}$$

Complete mass spectrum:

$h, H, A, H_{\text{pm}} = 119.13 \quad 902.4 \quad 902.6 \quad 906.3$

Neutralinos = 328.3 701.8 760.2 816.2

Charginos = 701.6 816.1

$\text{stau}_1, \text{stau}_2, \text{snu}_\tau = 330.2 \quad 674.3 \quad 666.8$

$\text{stop}_1, \text{stop}_2 = 739.4 \quad 1121.8$

$\text{sbot}_1, \text{sbot}_2 = 1043.3 \quad 1096.0$

$\text{se}_R, \text{se}_L, \text{snue} = 422.8 \quad 696.1 \quad 691.3$

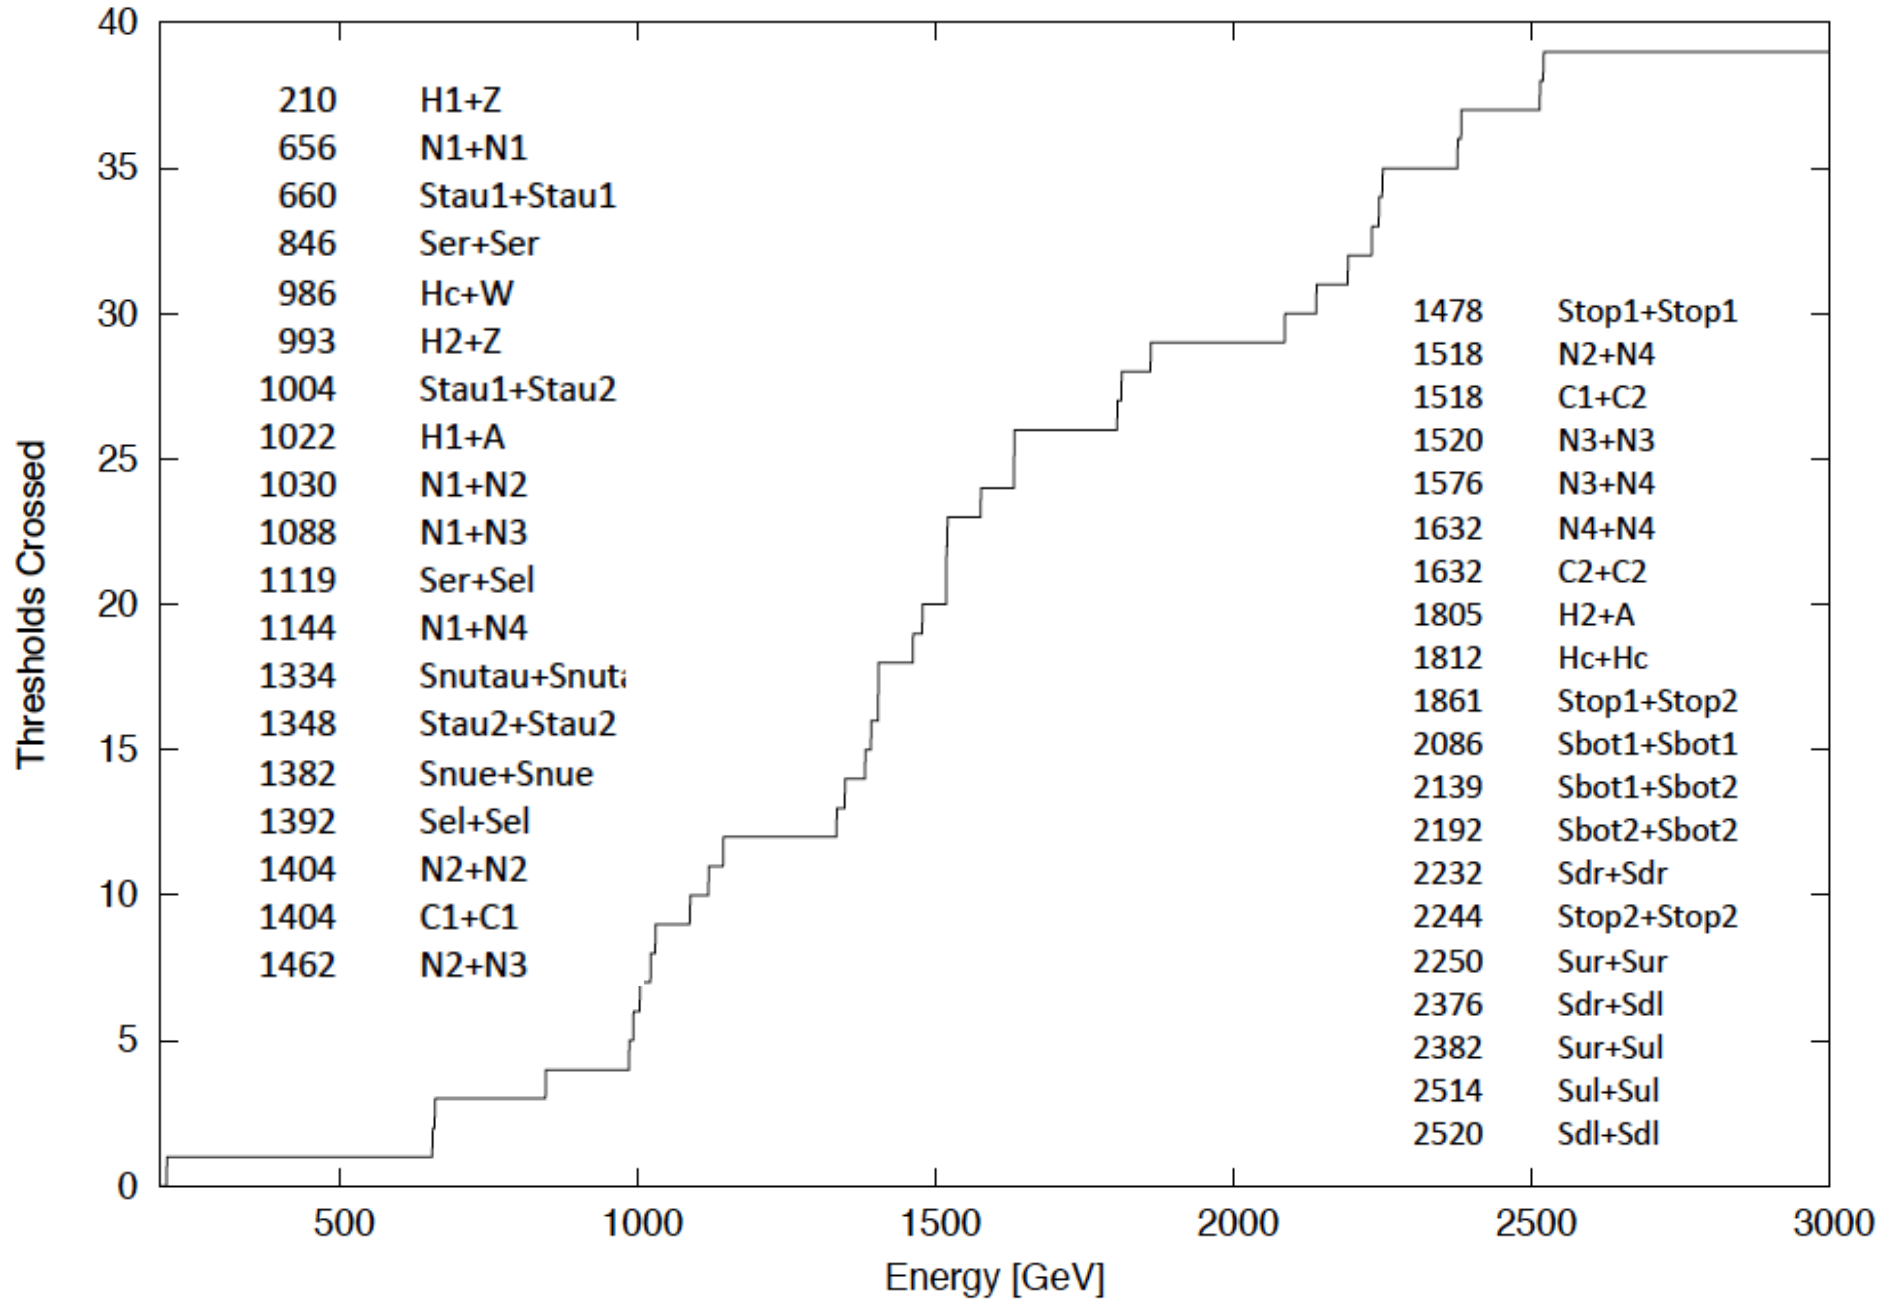

$\text{su}_R, \text{su}_L, \text{sd}_R, \text{sd}_L = 1125.7 \quad 1257.7 \quad 1116.1 \quad 1260.0$

Gluino = 1239.7

Plan for Study

A team of physicists have gathered to select and initiate full study of a benchmark point (Allanach, Desch, Ellis, Giudice, Kraml, Linssen, Martin, Thomson, Wells). The goals are to

- Study panoply of event signatures from one model, rather than one or two signatures for each of many models
- Investigate the qualitative value added of full simulation of a model: dark matter properties, numerous unification studies, flavor studies, implications for baryogenesis, confirmation of underlying theory (supersymmetry), etc.
- Understand the complementary role that LHC can play leading up to linear collider for an example theory. (Squarks, gluinos good at LHC, sleptons, charginos and neutralinos good at CLIC, etc.)

This study is a CLIC study, in that some beam parameterization depends on that choice, but we welcome ILC inputs and discussion.
