Horizontal scan

Vertical scan

Conclusion

Lattice diagnostics

- ▶ Unexplained emittance growth during extraction
- ▶ Verification of the transfer matrices
- ▶ Some studies needs very low BPM scale errors

Grid scan¹

- ▶ Little influence of correctors scale errors
- ▶ Determine if there are BPM scale errors
- ▶ Clear evidence of non-linearities

Conclusion

Grid Scan Principle

- ▶ Use 2 correctors to scan a grid in x and x' or in y and y'
- ▶ Use 2 BPMs to measure that grid.

[Motivations](#)[Principle](#)[Determination of scale factors](#)[Implementation](#)[Horizontal scan](#)[Vertical scan](#)[Conclusion](#)

Phase Space Normalization

Normalization

- ▶ Phase space normalization :

$$\begin{bmatrix} u \\ v \end{bmatrix} = \begin{bmatrix} \sqrt{1/\epsilon\beta_1} & 0 \\ \sqrt{\alpha_1/\epsilon\beta_1} & \sqrt{\beta_1/\epsilon} \end{bmatrix} \times \begin{bmatrix} x_1 \\ x'_1 \end{bmatrix}$$

with u and v in σ units.

- ▶ squareness of the grid (vectors \vec{h}_i and \vec{k}_i define element i of the grid):

$$\chi = \frac{1}{2N} \sum_{i=1}^N \frac{|\vec{h}_i|^2 + |\vec{k}_i|^2}{\det(\vec{h}_i, \vec{k}_i)}$$

- ▶ in normalized phase space all grids have same squareness and area

Determination of scale factors

Formalism

- ▶ a_i scale factor of BPM i (\tilde{x} is the measured value):

$$x_i = a_i \tilde{x}_i$$

- ▶ as we have :

$$x'_i(j) = \frac{x_j - R_{11}^{i:j} x_i}{R_{12}^{i:j}}$$

- ▶ we got :

$$x'_i(j) = \frac{a_j \tilde{x}_j - R_{11}^{i:j} a_i \tilde{x}_i}{R_{12}^{i:j}}$$

- ▶ the area $A(i,j)$ of the grid measured by BPM i and j is:

$$A(i,j) = \Delta u_i \Delta v_i(j)$$

with $\Delta \tilde{u}_i$ and $\Delta \tilde{v}_i(j)$ varying as \tilde{x}_i and $\tilde{x}'_i(j)$

Conclusion

Determination of scale factors

System of equations

- ▶ From previous equations it comes that :

$$\tilde{A}(i, j) = a_i a_j A(i, j) - \frac{R_{11}^{i:j}}{R_{12}^{i:j}} \left(1 - \frac{a_i}{a_j} \right) \Delta u_i$$

- ▶ In EXT there is 24 BPMs, so for each plane :
 - ▶ 24 a_i to determine
 - ▶ 300 non linear, coupled equations !!

Trick

- ▶ $a_i \sim a_j \simeq 1 \Rightarrow$ most of the cases (if $\frac{R_{11}^{i:j}}{R_{12}^{i:j}} < 1$):

$$\tilde{A}(i, j) = a_i a_j A(i, j)$$

Trick 2

- ▶ I don't know how to solve such a system :-)
- ▶ \Rightarrow Iterative method with :

$$\tilde{a}_k = \langle \tilde{A}(i, j) \rangle_{i \text{ or } j=k} - \langle \tilde{A}(i, j) \rangle_{i \text{ and } j \neq k} + 1$$

BPM Scale Factors Determination

- ▶ Used ZH1X and ZH2X with gain of 0.5 during iterations
- ▶ ZH1X and ZH2X have little phase advance => small amplitude scan (0.3σ).

Motivations

Principle

Determination of
scale factors

Implementation

Horizontal scan

Vertical scan

Conclusion

Scale Factors Results

- ▶ all EXT BPMs within 20% errors on scales except :
 - ▶ MQF11X and MQD14X
 - ▶ MQM15FF and MFB2FF (too large amplitude in FF to be believed)

Vertical scan

Conclusion

Squareness after BPM scale factors correction

Vertical Scan

- ▶ Used ZV1X and ZV2X
- ▶ Vertical plane less sensitive to non linear fields
- ▶ 3σ scan
- ▶ 10% errors on scale factors found. (except MQD2X, MQD14X and MFB2FF)

Conclusion

Conclusion

- ▶ Grid scans has been made at ATF2
- ▶ Might be used to determine BPM scale errors
- ▶ No evidence of any mismatch
- ▶ Some BPMs identified with bad scales

Prospects

- ▶ Improve scale factor fit method (any suggestions ?)
