

NA2 - webinfo for EUDET

H. ABRAMOWICZ, TEL AVIV UNIVERSITY

Proposal for discussion

- Domain name: www.eudet.org (Joachim Mnich)
- Use the ZOPE system
- Follow the EUROTEV layout
- Delegate responsibilities to work-packages

ZOPE SYSTEM

- ZOPE is an open source web application server
- ZOPE helps to create dynamic web applications such as portal and intranet sites quickly.
- Need of someone who understands ZOPE and can define the framework or at least help in setting up the environment (volunteer !!!)

EUROTEV LAYOUT

- Home page: State mission, list/link workpackages, list contacts (TAU)
- General Info: Project Description (proposal, contract), Structure of the Project, (TAU)
- Workpackages: chart with links - need responsible from each work package (volunteers?)
- Participating Institutes (TAU?)
- Calendar: Select agenda server (CDS DESY?), list events ... - (volunteer?/TAU?)
- Reports and Presentations - by workpackage? “self”-updated through ZOPE

- Recruitment - “self”-updated through ZOPE
- Internal - do we need to protect information? What would be the content? Each workpackage should maintain its own link. Do we need to set standards?

PLAN

- Get list of interested/competent people
- Agree on layout and tools
- Divide work - one time investment
- Call for responsibles from each workpackage (may or may not be the same as in the first point)
