

SiPM properties study

by

INFN Roma-1

and

University “la Sapienza” of Rome

- first results

*C. Bosio, S. Gentile,
E. Kuznetsova, F. Meddi*

SiPM customers and producers

AHCAL

scintillator tiles with WLS fiber and SiPM

*HEP, astrophysics, medical
apps...*

SiPM produced by :

- ***MEPhI / PULSAR (Russia)***
- ***Obninsk Uni / CPTA (Russia)***
- ***HAMAMATSU (Japan)***
- ***IRST (Italy)***
- ***SensL (Ireland)***
- ***?..***

SiPM STUDIES at ROMA

First steps :

- *Development of the test setup and measurement procedure*
- *General measurements of the SiPM response to LED light
(single photoelectron spectra)*
- *Comparison of SiPM produced by different manufacturers*

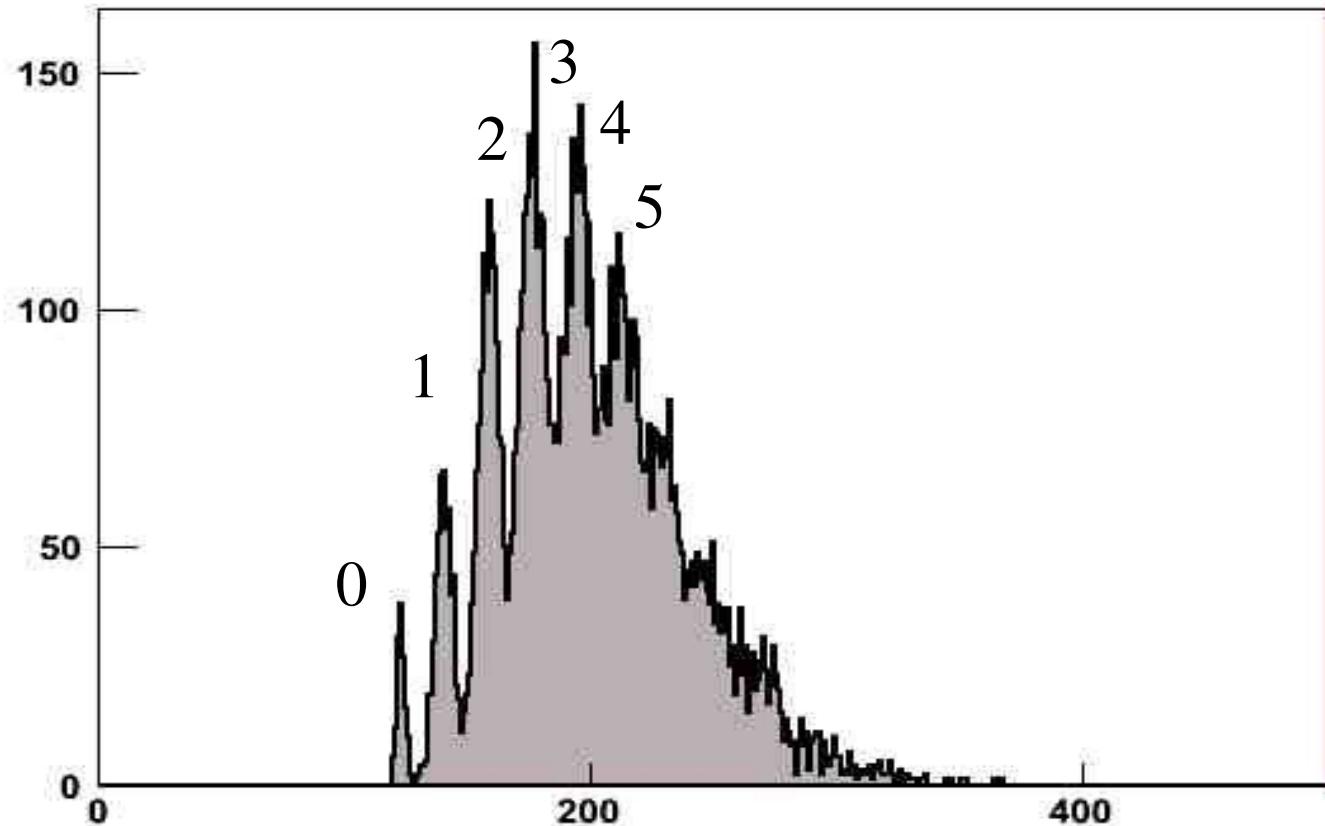

SiPM samples :

- *Obninsk Uni / CPTA*
- *HAMAMATSU*
- *FORIMTECH / CPTA*
- *IRST*
- *SensL*

Measurements :

- *Current-Voltage characteristics*
- *Response to low-intensity light
(UV LED)*

SINGLE PHOTOELECTRON SPECTRUM

Parameters :

- *Gain*
- *Width of the pedestal and single pe peak*
- *Efficiency of light registration*
- *Crosstalk between pixels*

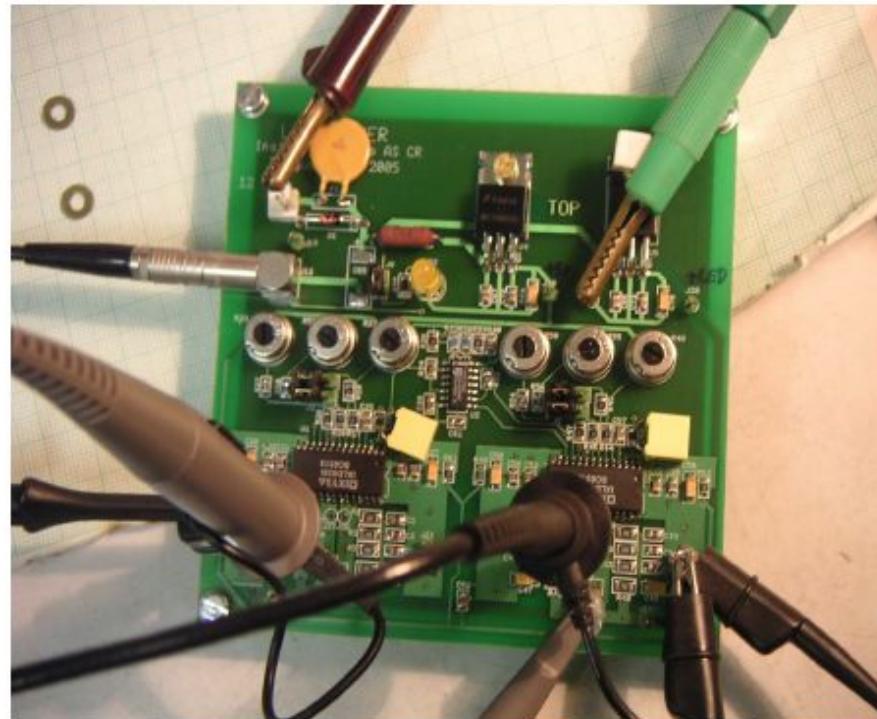

LED DRIVE

Low intensity fast light pulses :

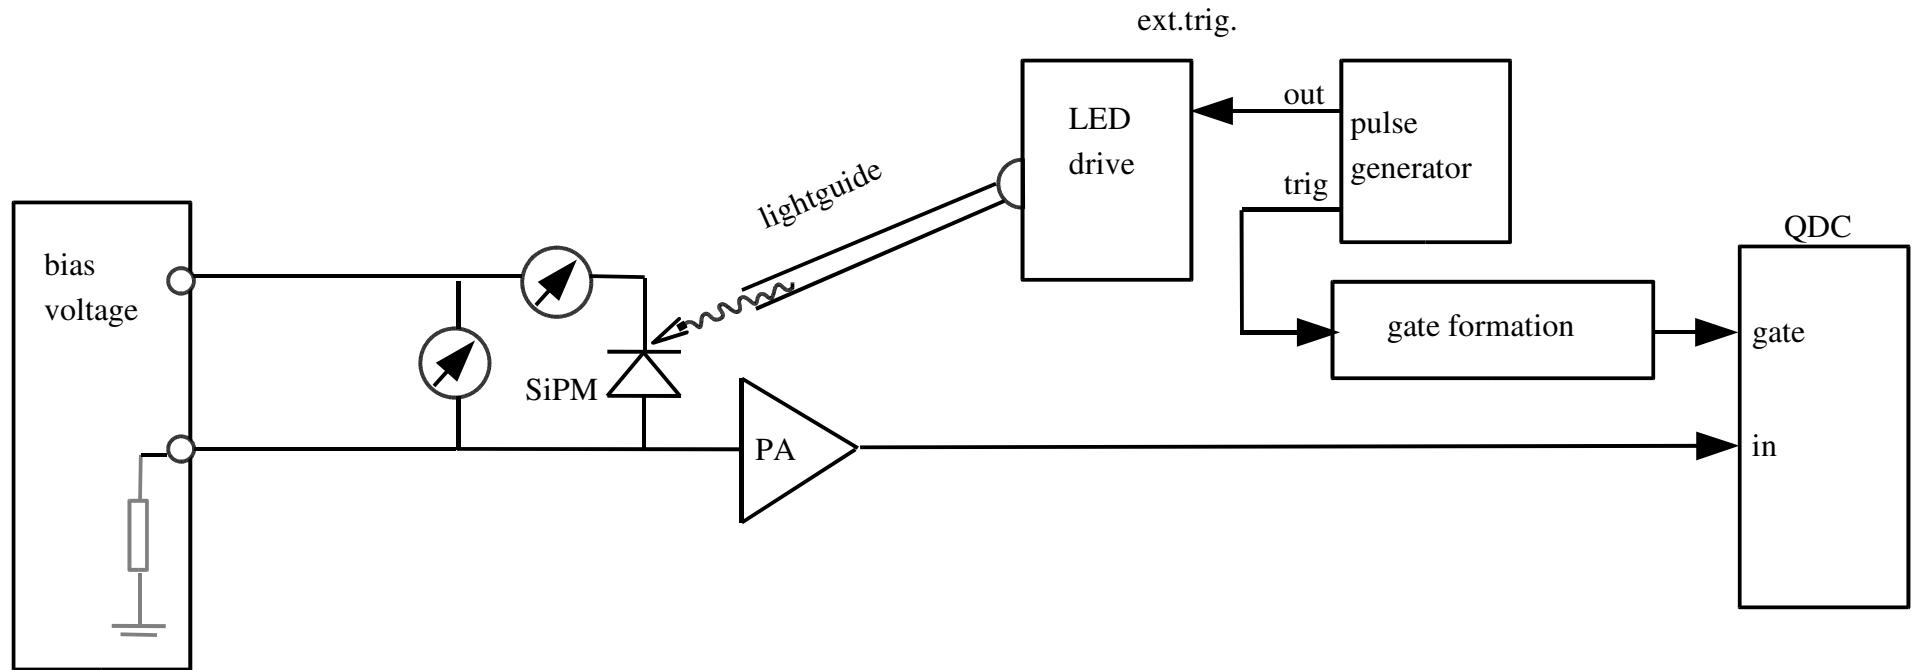

LED drive from Institute of Physics ASCR Prague

- *developed for Calibration and Monitoring Board*
- *external trigger*
- *variable current pulse width*
- *variable current pulse amplitude*

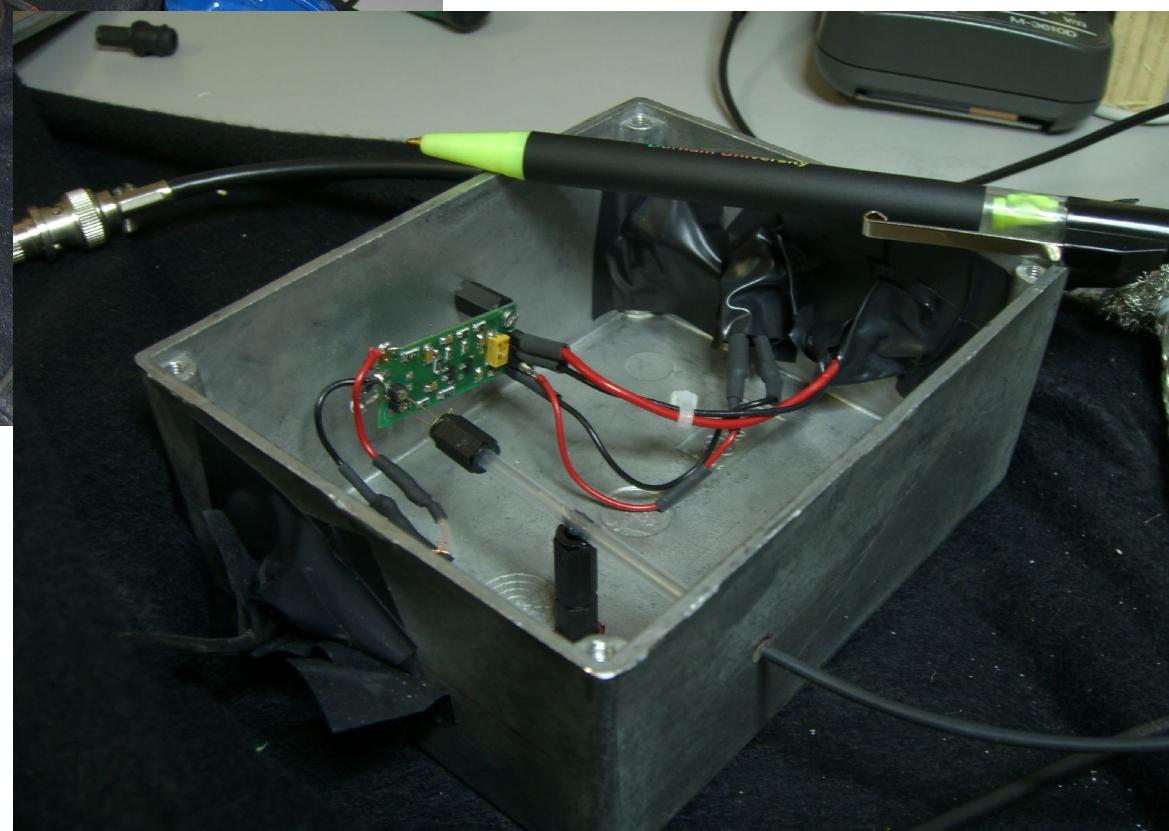

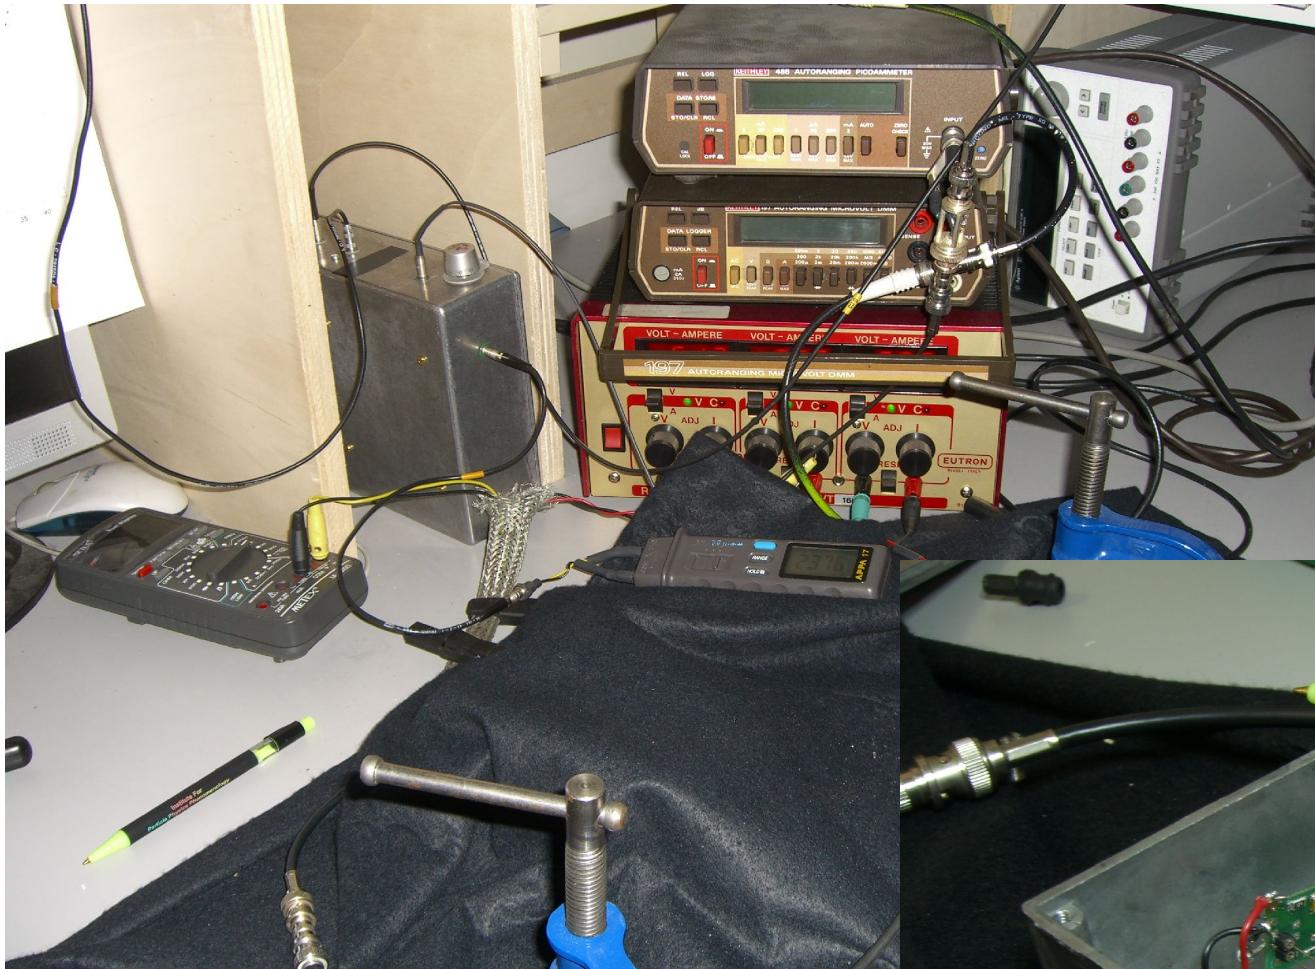

- Common input for signal LED-trigger, lemo, 50Ω
- One 12V (60mA) supply, protection
- Rise time 2ns, tested with P5050 scope probe (8pF, 500MHz)
 $C=8\text{pF}$, $L=30\text{nH}$
 $f_{\text{res}}=290\text{MHz}$

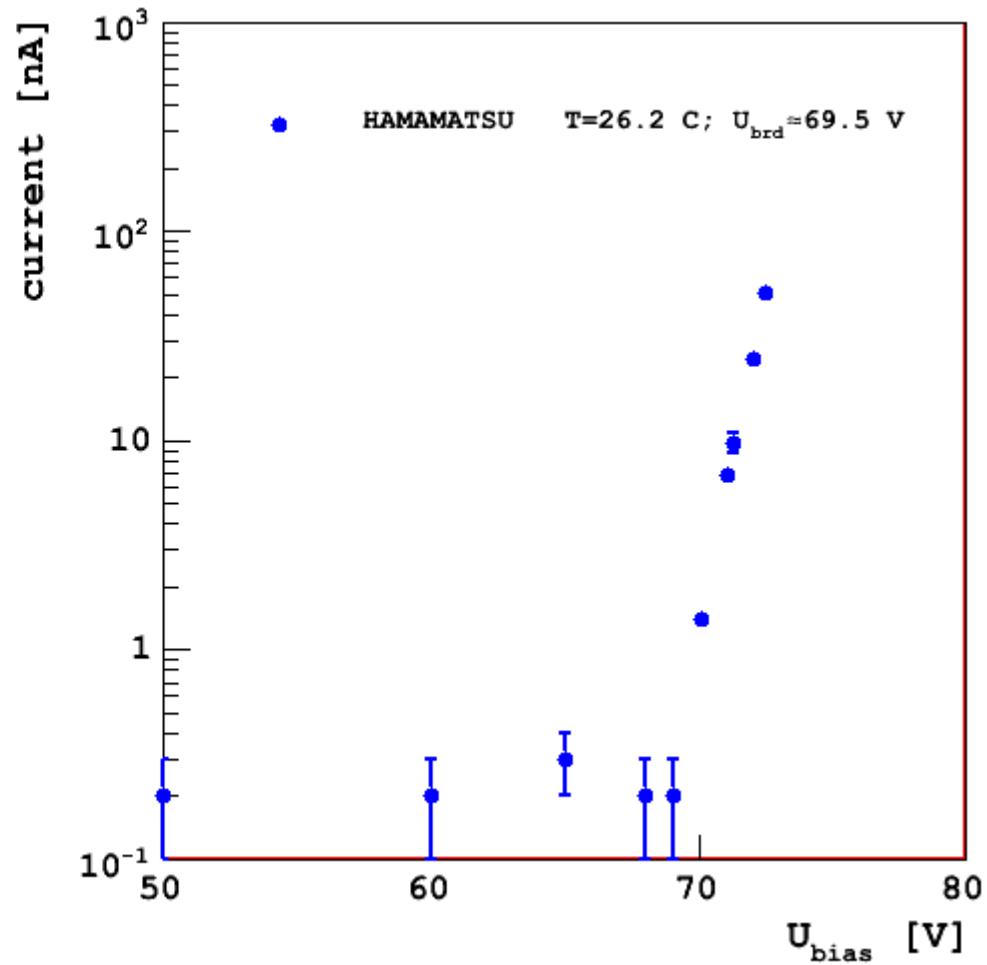

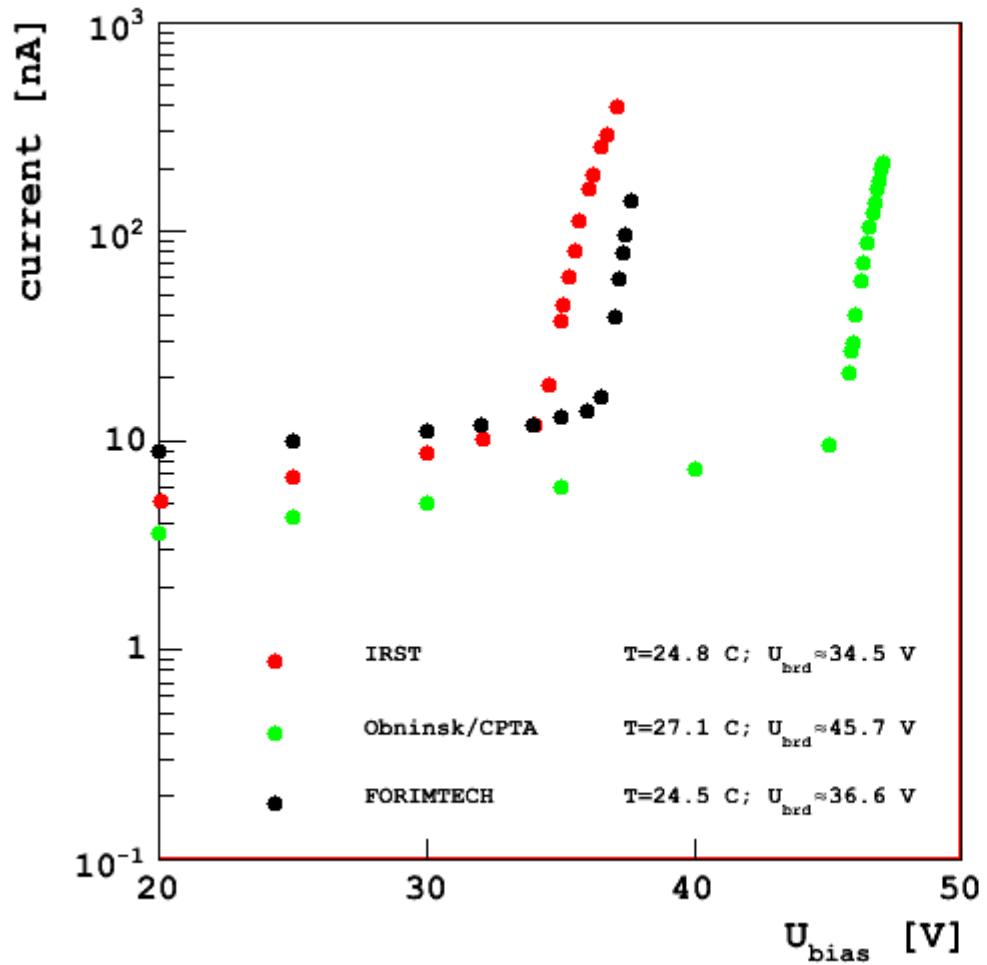

SETUP @ ROMA1

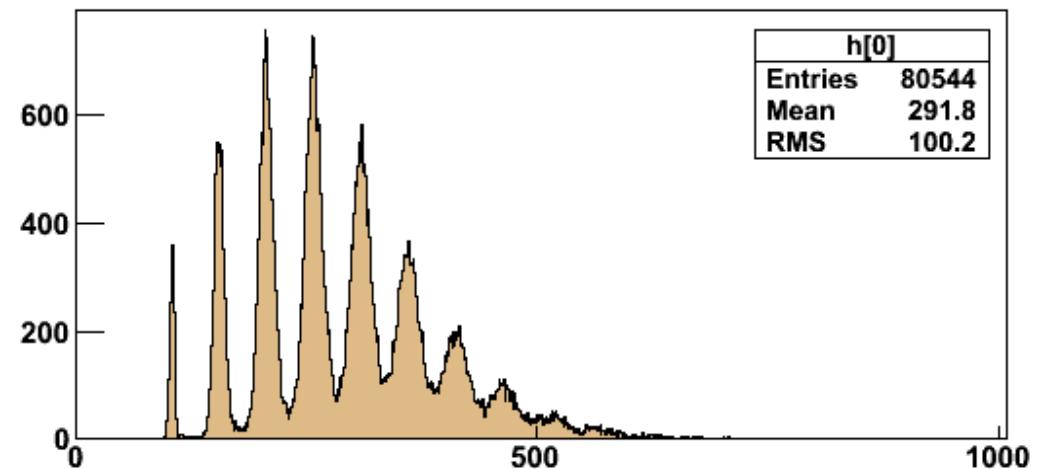

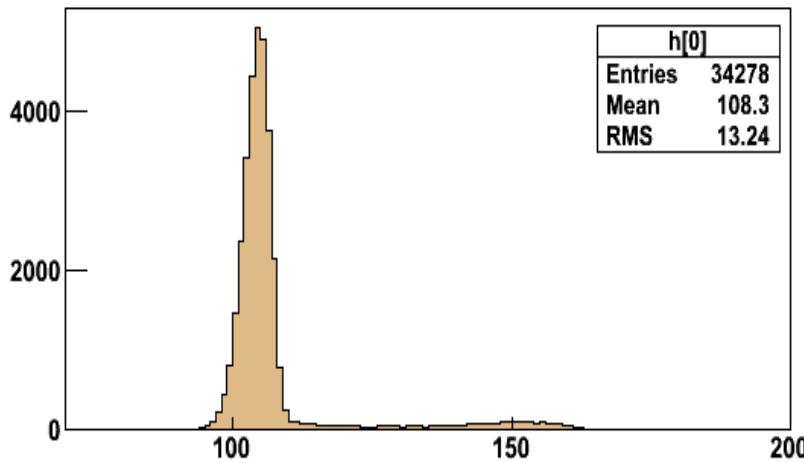

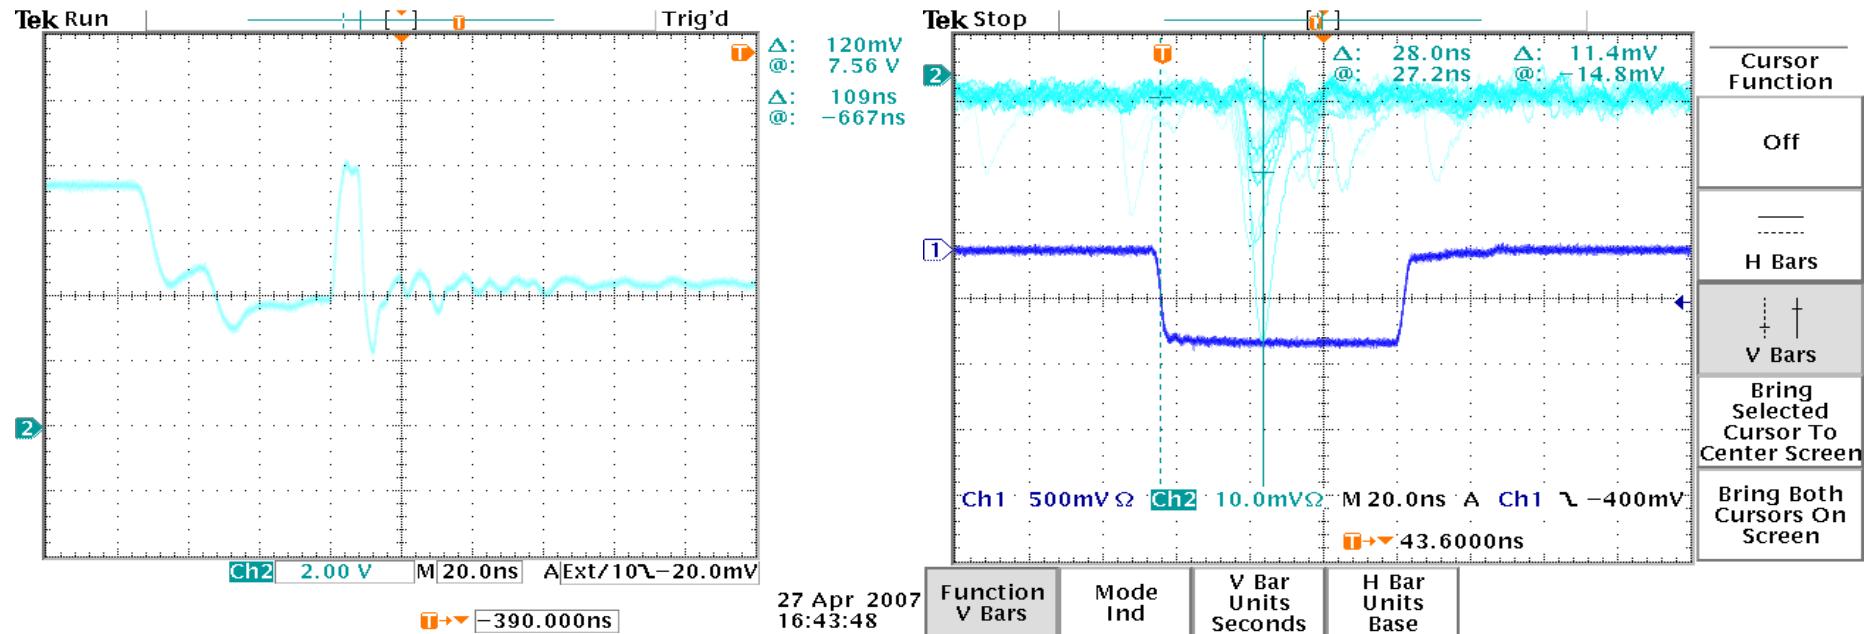

SETUP @ ROMA1

FIRST RESULTS - IV

FIRST RESULTS - light response

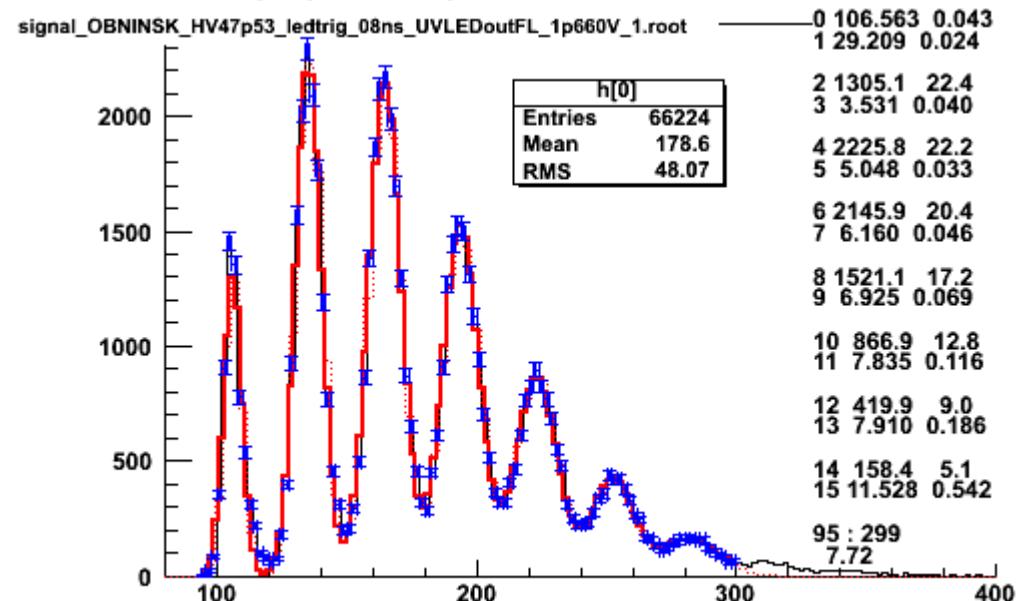

SPECTRA TREATMENT : INITIAL PROCEDURE

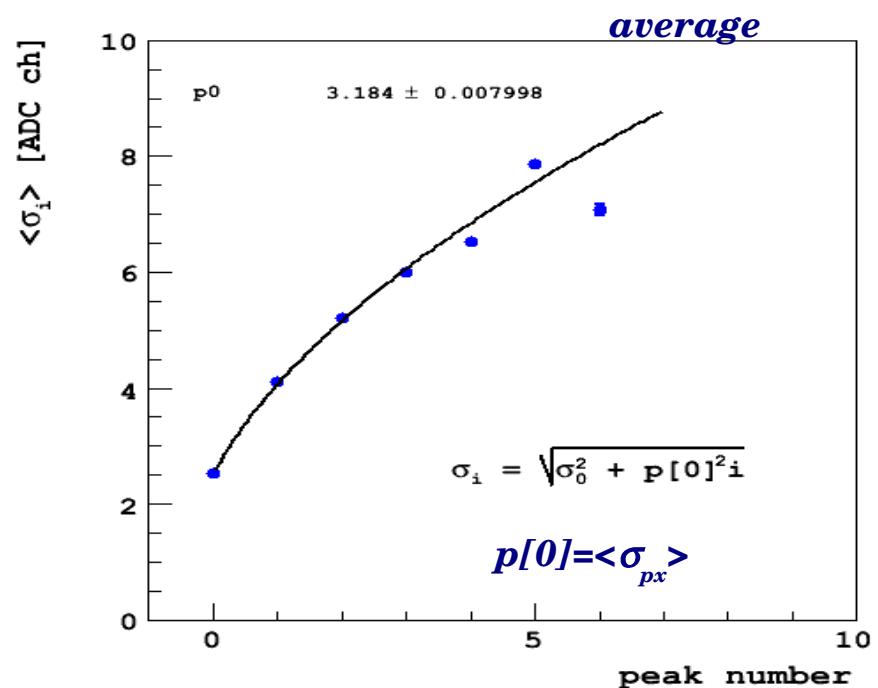

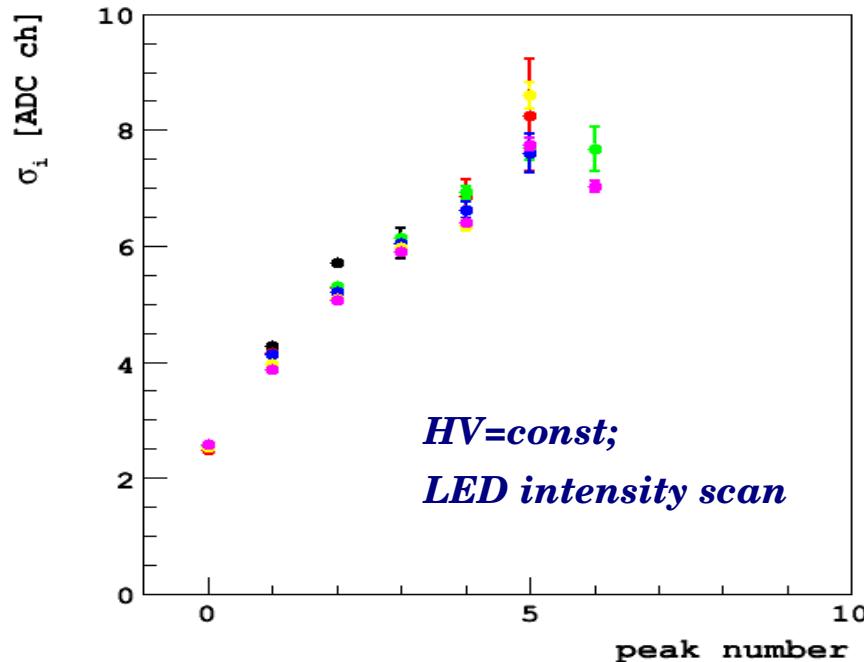

Fit parameters :

- pedestal
- peak distance
- gauss N_i
- gauss σ_i

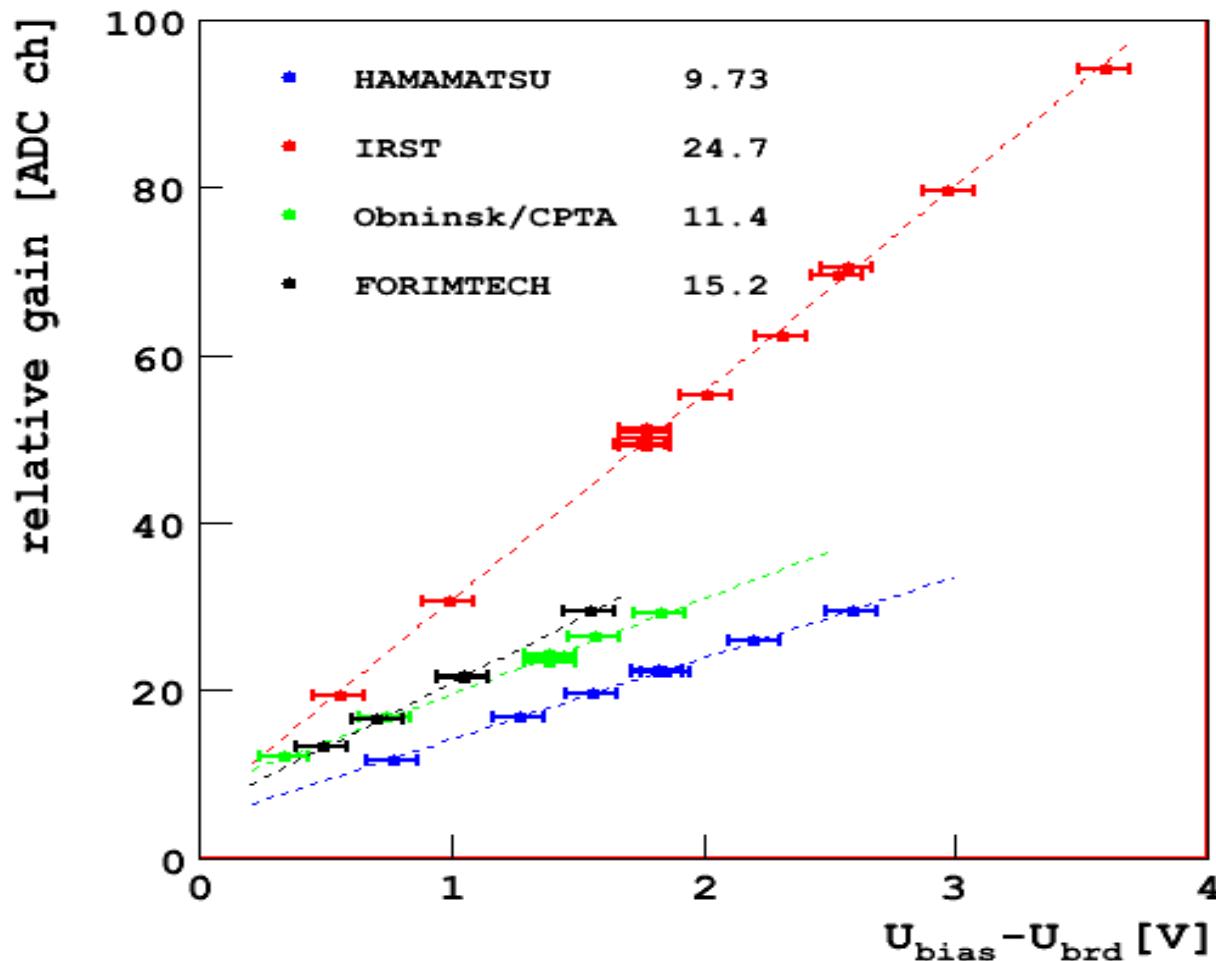

(no eff. nor x-talk consideration)

Intensity scan @ bias_U=const : x-check

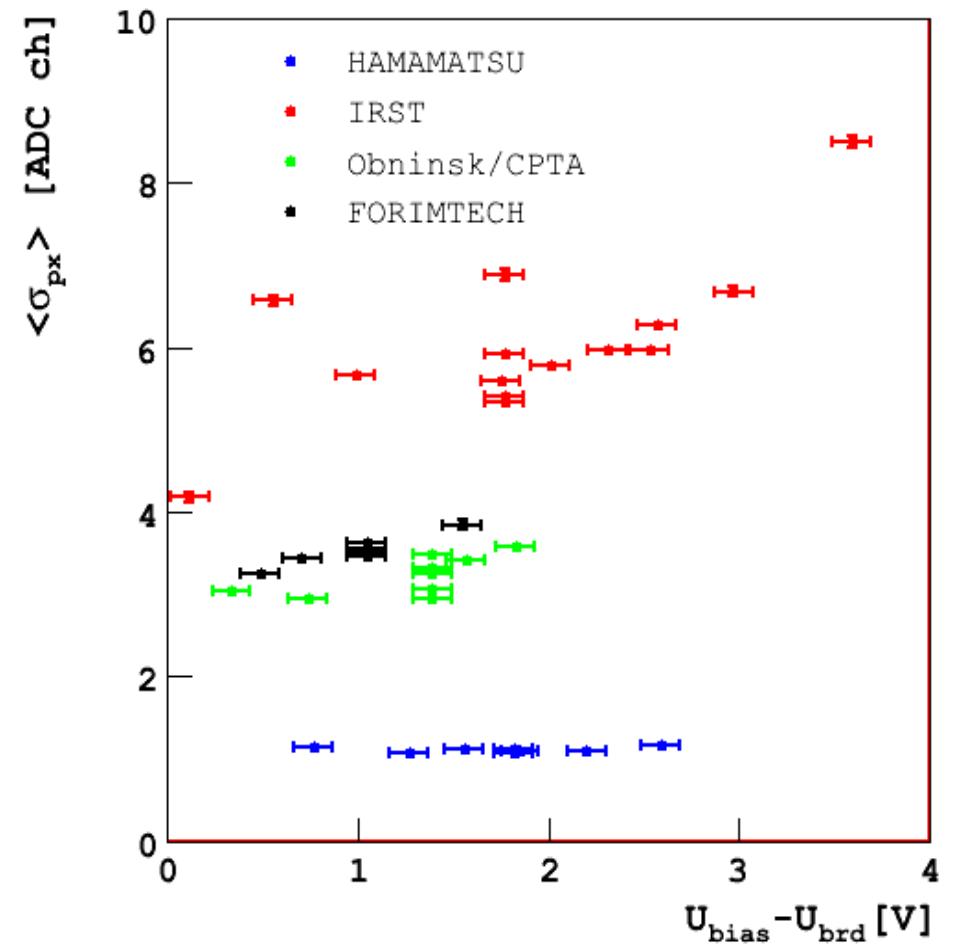

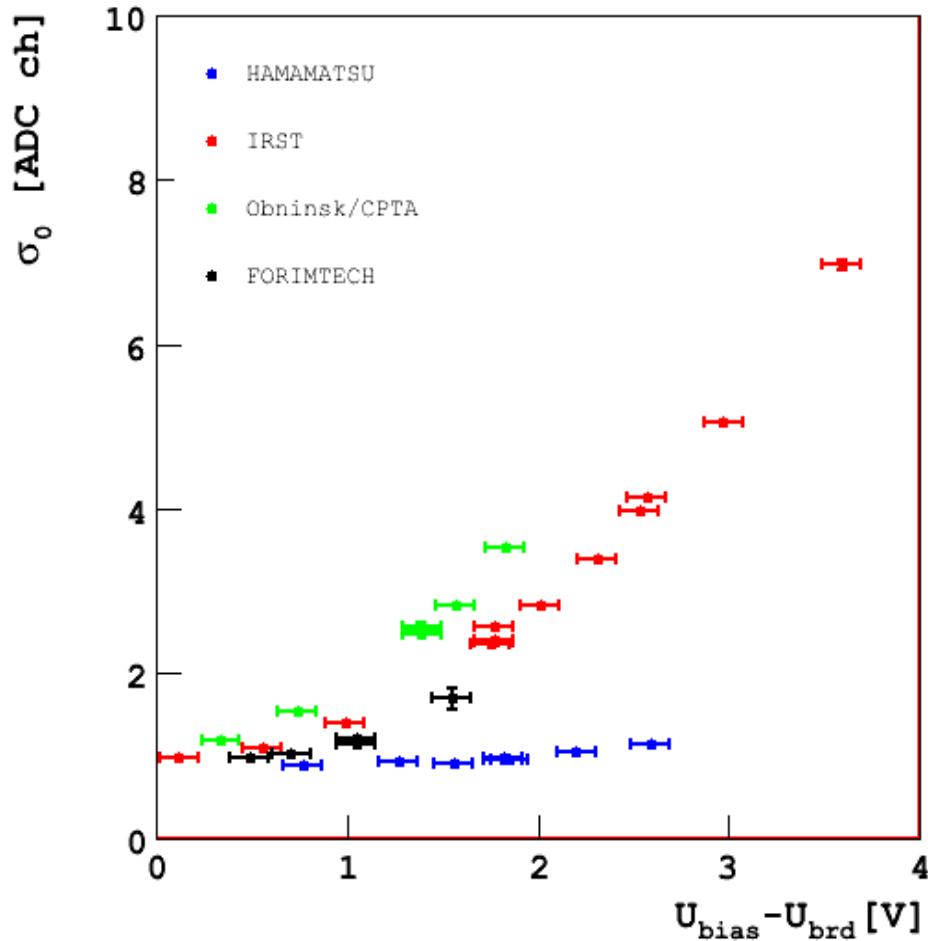

SPECTRA TREATMENT : PRELIMINARY RESULTS

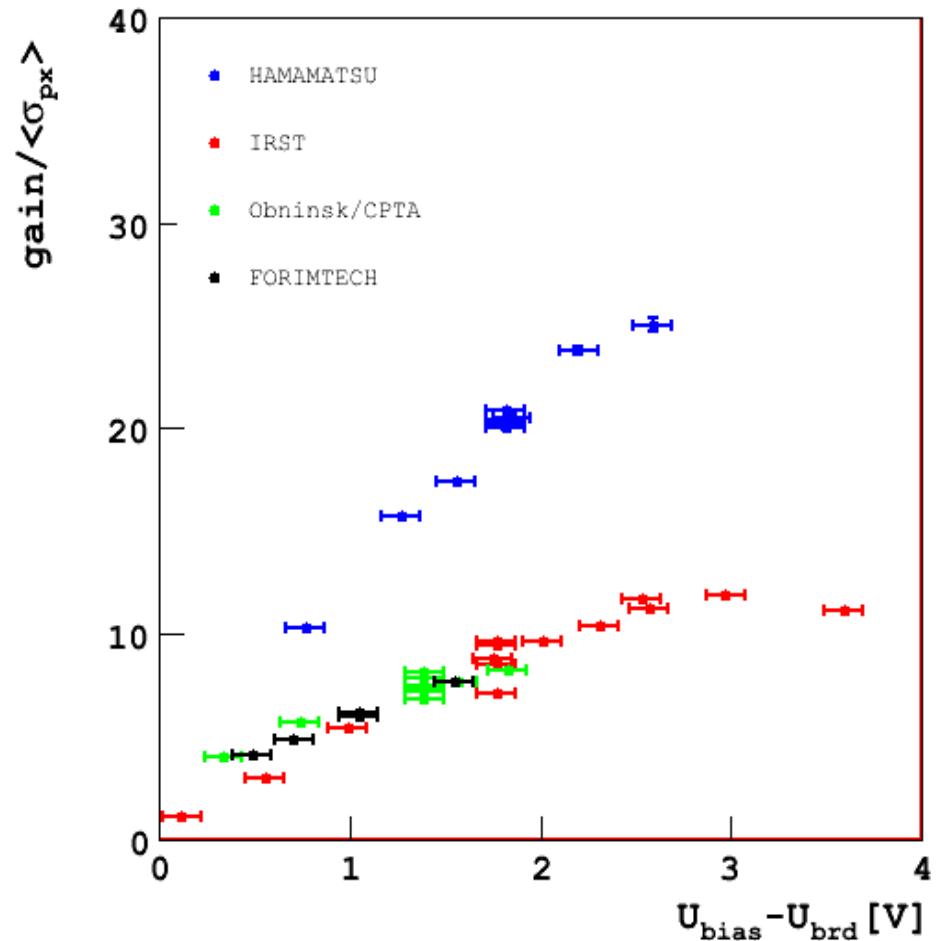

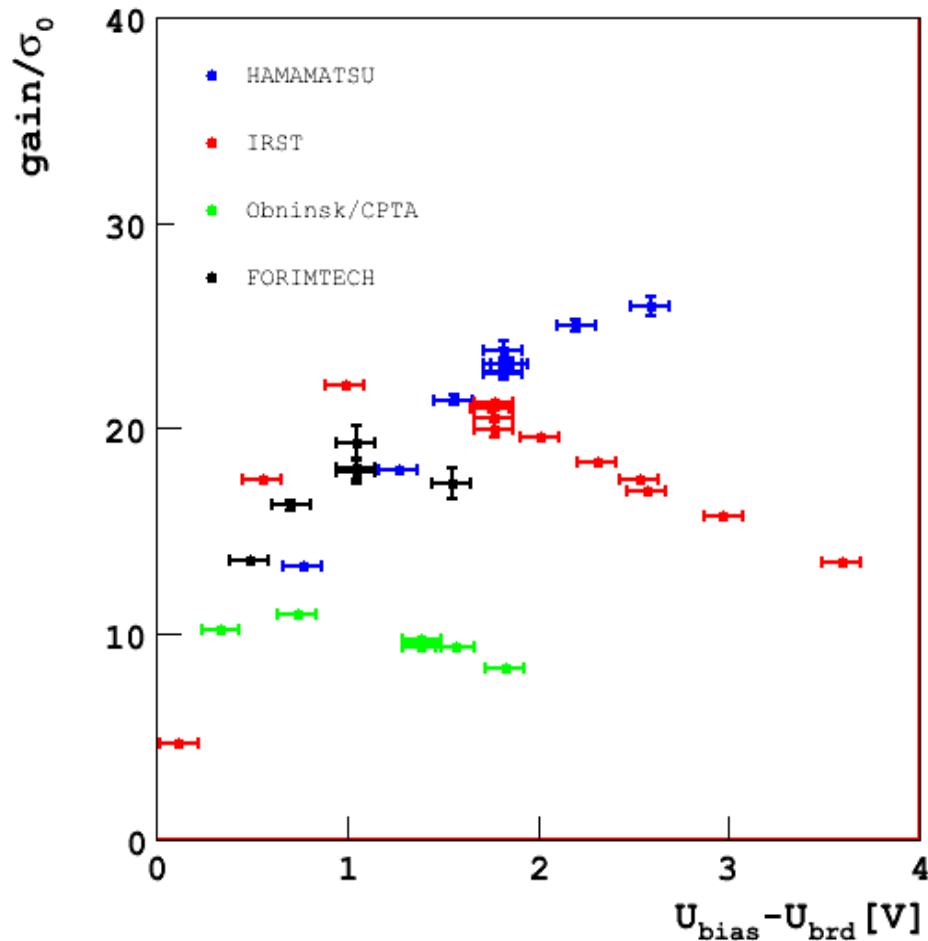

No temperature control yet :

- $\langle T \rangle \sim 24 \text{ } ^\circ\text{C}$
- $\Delta T(\text{one sample}) \approx 2 \text{ } ^\circ\text{C}$
- $\Delta T(\text{all}) \approx 4 \text{ } ^\circ\text{C}$

SPECTRA TREATMENT : PRELIMINARY RESULTS

SPECTRA TREATMENT : PRELIMINARY RESULTS

NEXT STEPS

Highest priority :

- *setup improvement (noise reduction, temperature control...)*
- *further development of the spectra treatment procedure (efficiency, x-talk)*
- *measurement program extension*
- *repeat the measurements for more samples*

After establishment of the full measurement procedure:

- *measurements of PDE as a function of light wavelength*

THANKS!

Valeri Saveliev, Ivo Polak, Nicola D'Ascenzo
