

Linear Collider Collaboration Status

L. Evans

Organization

Objectives

- Support long-term R&D on CLIC, the only credible way we have today to access multi-TeV leptons, as a possible future option after LHC.
- - Support the construction of a staged linear collider in Japan. Prepare a site-specific design of the machine and its detectors.
- -Exploit the synergy between ILC and CLIC. Prepare a plan for the sharing of the work.

Visit to Japan, 25-27 March
